Study Scope

Subject Information	
Topic Classification:	Technical Variables -- HOUSEHOLD
	Geographic Variables -- HOUSEHOLD
	Group Quarters Variables -- HOUSEHOLD
	Economic Characteristic Variables -- HOUSEHOLD
	Household Composition Variables -- HOUSEHOLD
	Technical Variables -- PERSON
	Demographic Variables -- PERSON
	Race, Ethnicity, and Nativity Variables -- PERSON
	Health Insurance Variables -- PERSON
	Education Variables -- PERSON
	Work Variables -- PERSON
	Income Variables -- PERSON
	Migration Variables -- PERSON
	Disability Variables -- PERSON

	Place of Work and Travel Time Variables -- PERSON
	Other Variables -- PERSON
Summary Data Description	
Time Period:	2001
Country:	United States
Summary Data Description	
Time Period:	2015
Country:	United States
Notes	
Note:	Additional notes on a sample that is part of this study: 2001 ACS\ Density of the full data file: 0.43% Density of this extract: 0.43%
	Additional notes on a sample that is part of this study: 2015 ACS\ Density of the full data file: 1.0% Density of this extract: 1.0%

Data Access - Use Statement

Confidentiality Declaration	
None	
Contact Persons:	IPUMS-USA
Affiliation:	Minnesota Population Center
URI:	http://usa.ipums.org
Citation Requirement	
Publications and research reports based on the IPUMS-USA database must cite it appropriately. The citation should include the following:	
Steven Ruggles, Katie Genadek, Ronald Goeken, Josiah Grover, and Matthew Sobek. Integrated Public	

Use Microdata Series: Version 6.0 [Machine-readable database]. Minneapolis: University of Minnesota, 2015.

The licensing agreement for use of IPUMS-USA data requires that users supply us with the title and full citation for any publications, research reports, or educational materials making use of the data or documentation. Please add your citation to the IPUMS bibliography at <http://bibliography.ipums.org/>.

Conditions

Users of IPUMS-USA data must agree to abide by the conditions of use. A user's license is valid for one year and may be renewed. Users must agree to the following conditions:

- (1) No fees may be charged for use or distribution of the data.
- (2) Cite IPUMS appropriately. For information on proper citation, refer to the citation requirement section of this DDI document.
- (3) Tell us about any work you do using the IPUMS. Publications, research reports, or presentations making use of IPUMS-USA should be added to our Bibliography. Continued funding for the IPUMS depends on our ability to show our sponsor agencies that researchers are using the data for productive purposes.
- (4) The IPUMS cannot be used for genealogical research
- (5) It is difficult to use the IPUMS to study small geographic areas. In the IPUMS census samples for years 1940-present, no places having a population of fewer than 100,000 persons can be identified.
- (6) Use it for GOOD -- never for EVIL.
- (7) Please notify ipums@umn.edu regarding errors in the data or documentation.

Disclaimer

The user of the data acknowledges that the original collector of the data, the authorized distributor of the data, and the relevant funding agency bear no responsibility for use of the data or for interpretations or inferences based upon such uses.

Study Notes

Notes	
Note:	User-provided description: Revision of (as much data as possible to understand America)
	This extract is a revision of the user's previous extract, number 1.

§ 3. File Description

File

File Name:	usa_00002.dat
Contents of Files:	Microdata records
Type:	rectangular
File Type:	ISO-8859-1 data file
Data Format:	fixed length fields
Place of File Production:	Minnesota Population Center, 50 Willey Hall, 225 - 19th Avenue South, Minneapolis, MN 55455

§ 4. Variable Description

Jump to Variable

1. [RECTYPE](#) (Record type)
2. [YEAR](#) (Census year)
3. [DATANUM](#) (Data set number)
4. [SERIAL](#) (Household serial number)
5. [NUMPREC](#) (Number of person records following)
6. [SUBSAMP](#) (Subsample number)
7. [HHWT](#) (Household weight)
8. [HHTYPE](#) (Household Type)
9. [REPWT](#) (Household replicate weights)
10. [CLUSTER](#) (Household cluster for variance estimation)
11. [ADJUST](#) (Adjustment factor, ACS/PRCS)
12. [CPI99](#) (CPI-U adjustment factor to 1999 dollars)
13. [REGION](#) (Census region and division)
14. [STATEICP](#) (State (ICPSR code))
15. [STATEFIP](#) (State (FIPS code))
16. [COUNTY](#) (County)
17. [COUNTYFIPS](#) (County (FIPS code))
18. [METRO](#) (Metropolitan status)
19. [MET2013](#) (Metropolitan area, 2013 OMB delineations)
20. [MET2013ERR](#) (Coverage error in MET2013 variable)
21. [CITY](#) (City)
22. [CITYERR](#) (Coverage error in CITY variable)
23. [PUMA](#) (Public Use Microdata Area)

24. [PUMARES2MIG](#) (Public Use Microdata Area matching MIGPUMA)
25. [STRATA](#) (Household strata for variance estimation)
26. [CPUMA0010](#) (Consistent PUMA, 2000-2010)
27. [HOMELAND](#) (American Indian, Alaska Native, or Native Hawaiian homeland area)
28. [CNTRY](#) (Country)
29. [GQ](#) (Group quarters status)
30. [FARM](#) (Farm status)
31. [OWNERSHP](#) (Ownership of dwelling (tenure) [general version])
32. [OWNERSHPD](#) (Ownership of dwelling (tenure) [detailed version])
33. [MORTGAGE](#) (Mortgage status)
34. [MORTGAG2](#) (Second mortgage status)
35. [COMMUSE](#) (Commercial use)
36. [FARMPROD](#) (Sales of farm products)
37. [ACREHOUS](#) (House acreage)
38. [MORTAMT1](#) (First mortgage monthly payment)
39. [MORTAMT2](#) (Second mortgage monthly payment)
40. [TAXINCL](#) (Mortgage payment includes property taxes)
41. [INSINCL](#) (Mortgage payment includes property insurance)
42. [PROPINSR](#) (Annual property insurance cost)
43. [PROPTX99](#) (Annual property taxes, 1990)
44. [OWNCOST](#) (Selected monthly owner costs)
45. [RENT](#) (Monthly contract rent)
46. [RENTGRS](#) (Monthly gross rent)
47. [RENTMEAL](#) (Meals included in rent)
48. [CONDOFEE](#) (Monthly condominium fee)
49. [MOBLHOME](#) (Annual mobile home costs)
50. [COSTELEC](#) (Annual electricity cost)
51. [COSTGAS](#) (Annual gas cost)
52. [COSTWATR](#) (Annual water cost)
53. [COSTFUEL](#) (Annual home heating fuel cost)
54. [HHINCOME](#) (Total household income)
55. [FOODSTMP](#) (Food stamp reciprocity)
56. [VALUEH](#) (House value)
57. [SSMC](#) (Same-sex married couple)
58. [NFAMS](#) (Number of families in household)
59. [NSUBFAM](#) (Number of subfamilies in household)
60. [NCOUPLES](#) (Number of married couples in household)
61. [NMOTHERS](#) (Number of mothers in household)
62. [NFATHERS](#) (Number of fathers in household)
63. [MULTGEN](#) (Multigenerational household [general version])
64. [MULTGEND](#) (Multigenerational household [detailed version])

65. [CBNSUBFAM](#) (Number of subfamilies in household (original Census Bureau classification))
66. [REPWT1](#) (Household replicate weight 1)
67. [REPWT2](#) (Household replicate weight 2)
68. [REPWT3](#) (Household replicate weight 3)
69. [REPWT4](#) (Household replicate weight 4)
70. [REPWT5](#) (Household replicate weight 5)
71. [REPWT6](#) (Household replicate weight 6)
72. [REPWT7](#) (Household replicate weight 7)
73. [REPWT8](#) (Household replicate weight 8)
74. [REPWT9](#) (Household replicate weight 9)
75. [REPWT10](#) (Household replicate weight 10)
76. [REPWT11](#) (Household replicate weight 11)
77. [REPWT12](#) (Household replicate weight 12)
78. [REPWT13](#) (Household replicate weight 13)
79. [REPWT14](#) (Household replicate weight 14)
80. [REPWT15](#) (Household replicate weight 15)
81. [REPWT16](#) (Household replicate weight 16)
82. [REPWT17](#) (Household replicate weight 17)
83. [REPWT18](#) (Household replicate weight 18)
84. [REPWT19](#) (Household replicate weight 19)
85. [REPWT20](#) (Household replicate weight 20)
86. [REPWT21](#) (Household replicate weight 21)
87. [REPWT22](#) (Household replicate weight 22)
88. [REPWT23](#) (Household replicate weight 23)
89. [REPWT24](#) (Household replicate weight 24)
90. [REPWT25](#) (Household replicate weight 25)
91. [REPWT26](#) (Household replicate weight 26)
92. [REPWT27](#) (Household replicate weight 27)
93. [REPWT28](#) (Household replicate weight 28)
94. [REPWT29](#) (Household replicate weight 29)
95. [REPWT30](#) (Household replicate weight 30)
96. [REPWT31](#) (Household replicate weight 31)
97. [REPWT32](#) (Household replicate weight 32)
98. [REPWT33](#) (Household replicate weight 33)
99. [REPWT34](#) (Household replicate weight 34)
100. [REPWT35](#) (Household replicate weight 35)
101. [REPWT36](#) (Household replicate weight 36)
102. [REPWT37](#) (Household replicate weight 37)
103. [REPWT38](#) (Household replicate weight 38)
104. [REPWT39](#) (Household replicate weight 39)
105. [REPWT40](#) (Household replicate weight 40)

106. [REPWT41](#) (Household replicate weight 41)
107. [REPWT42](#) (Household replicate weight 42)
108. [REPWT43](#) (Household replicate weight 43)
109. [REPWT44](#) (Household replicate weight 44)
110. [REPWT45](#) (Household replicate weight 45)
111. [REPWT46](#) (Household replicate weight 46)
112. [REPWT47](#) (Household replicate weight 47)
113. [REPWT48](#) (Household replicate weight 48)
114. [REPWT49](#) (Household replicate weight 49)
115. [REPWT50](#) (Household replicate weight 50)
116. [REPWT51](#) (Household replicate weight 51)
117. [REPWT52](#) (Household replicate weight 52)
118. [REPWT53](#) (Household replicate weight 53)
119. [REPWT54](#) (Household replicate weight 54)
120. [REPWT55](#) (Household replicate weight 55)
121. [REPWT56](#) (Household replicate weight 56)
122. [REPWT57](#) (Household replicate weight 57)
123. [REPWT58](#) (Household replicate weight 58)
124. [REPWT59](#) (Household replicate weight 59)
125. [REPWT60](#) (Household replicate weight 60)
126. [REPWT61](#) (Household replicate weight 61)
127. [REPWT62](#) (Household replicate weight 62)
128. [REPWT63](#) (Household replicate weight 63)
129. [REPWT64](#) (Household replicate weight 64)
130. [REPWT65](#) (Household replicate weight 65)
131. [REPWT66](#) (Household replicate weight 66)
132. [REPWT67](#) (Household replicate weight 67)
133. [REPWT68](#) (Household replicate weight 68)
134. [REPWT69](#) (Household replicate weight 69)
135. [REPWT70](#) (Household replicate weight 70)
136. [REPWT71](#) (Household replicate weight 71)
137. [REPWT72](#) (Household replicate weight 72)
138. [REPWT73](#) (Household replicate weight 73)
139. [REPWT74](#) (Household replicate weight 74)
140. [REPWT75](#) (Household replicate weight 75)
141. [REPWT76](#) (Household replicate weight 76)
142. [REPWT77](#) (Household replicate weight 77)
143. [REPWT78](#) (Household replicate weight 78)
144. [REPWT79](#) (Household replicate weight 79)
145. [REPWT80](#) (Household replicate weight 80)
146. [RESPMODE](#) (Response mode)

147. [PERNUM](#) (Person number in sample unit)
148. [PERWT](#) (Person weight)
149. [SLWT](#) (Sample-line weight)
150. [REPWTP](#) (Person replicate weights)
151. [RELATE](#) (Relationship to household head [general version])
152. [RELATED](#) (Relationship to household head [detailed version])
153. [SEX](#) (Sex)
154. [AGE](#) (Age)
155. [BIRTHQTR](#) (Quarter of birth)
156. [MARST](#) (Marital status)
157. [BIRTHYR](#) (Year of birth)
158. [MARRNO](#) (Times married)
159. [MARRINYR](#) (Married within the past year)
160. [YRMARR](#) (Year married)
161. [DIVINYR](#) (Divorced in the past year)
162. [WIDINYR](#) (Widowed in the past year)
163. [FERTYR](#) (Children born within the last year)
164. [RACE](#) (Race [general version])
165. [RACED](#) (Race [detailed version])
166. [HISPAN](#) (Hispanic origin [general version])
167. [HISPAND](#) (Hispanic origin [detailed version])
168. [BPL](#) (Birthplace [general version])
169. [BPLD](#) (Birthplace [detailed version])
170. [ANCESTR1](#) (Ancestry, first response [general version])
171. [ANCESTR1D](#) (Ancestry, first response [detailed version])
172. [ANCESTR2](#) (Ancestry, second response [general version])
173. [ANCESTR2D](#) (Ancestry, second response [detailed version])
174. [CITIZEN](#) (Citizenship status)
175. [YRNATUR](#) (Year naturalized)
176. [YRIMMIG](#) (Year of immigration)
177. [YRSUSA1](#) (Years in the United States)
178. [YRSUSA2](#) (Years in the United States, intervalled)
179. [LANGUAGE](#) (Language spoken [general version])
180. [LANGUAGED](#) (Language spoken [detailed version])
181. [SPEAKENG](#) (Speaks English)
182. [TRIBE](#) (Tribe [general version])
183. [TRIBED](#) (Tribe [detailed version])
184. [RACAMIND](#) (Race: American Indian or Alaska Native)
185. [RACASIAN](#) (Race: Asian)
186. [RACBLK](#) (Race: black or African American)
187. [RACPACIS](#) (Race: Pacific Islander)

188. [RACWHT](#) (Race: white)
189. [RACOTHER](#) (Race: some other race)
190. [RACNUM](#) (Number of major race groups)
191. [HCOVANY](#) (Any health insurance coverage)
192. [HCOVPRIV](#) (Private health insurance coverage)
193. [HINSEMP](#) (Health insurance through employer/union)
194. [HINSPUR](#) (Health insurance purchased directly)
195. [HINSTRI](#) (Health insurance through TRICARE)
196. [HCOVPUB](#) (Public health insurance coverage)
197. [HINSCAID](#) (Health insurance through Medicaid)
198. [HINSCARE](#) (Health insurance through Medicare)
199. [HINSVA](#) (Health insurance through VA)
200. [HINSIHS](#) (Health insurance through Indian Health Services)
201. [SCHOOL](#) (School attendance)
202. [EDUC](#) (Educational attainment [general version])
203. [EDUCD](#) (Educational attainment [detailed version])
204. [GRADEATT](#) (Grade level attending [general version])
205. [GRADEATTD](#) (Grade level attending [detailed version])
206. [SCHLTYPE](#) (Public or private school)
207. [DEGFIELD](#) (Field of degree [general version])
208. [DEGFIELD2](#) (Field of degree [detailed version])
209. [DEGFIELD2](#) (Field of degree (2) [general version])
210. [DEGFIELD2D](#) (Field of degree (2) [detailed version])
211. [EMPSTAT](#) (Employment status [general version])
212. [EMPSTATD](#) (Employment status [detailed version])
213. [LABFORCE](#) (Labor force status)
214. [OCC](#) (Occupation)
215. [OCC1950](#) (Occupation, 1950 basis)
216. [OCC1990](#) (Occupation, 1990 basis)
217. [OCC2010](#) (Occupation, 2010 basis)
218. [IND](#) (Industry)
219. [IND1950](#) (Industry, 1950 basis)
220. [IND1990](#) (Industry, 1990 basis)
221. [CLASSWKR](#) (Class of worker [general version])
222. [CLASSWKR2](#) (Class of worker [detailed version])
223. [OCCSOC](#) (Occupation, SOC classification)
224. [INDNAICS](#) (Industry, NAICS classification)
225. [WKSWORK2](#) (Weeks worked last year, intervalled)
226. [UHRSWORK](#) (Usual hours worked per week)
227. [WRKLSTWK](#) (Worked last week)
228. [ABSENT](#) (Absent from work last week)

- 229. [LOOKING](#) (Looking for work)
- 230. [AVAILABLE](#) (Available for work)
- 231. [WRKRECAL](#) (Informed of work recall)
- 232. [WORKEDYR](#) (Worked last year)
- 233. [INCTOT](#) (Total personal income)
- 234. [FTOTINC](#) (Total family income)
- 235. [INCWAGE](#) (Wage and salary income)
- 236. [INCBUS00](#) (Business and farm income, 2000)
- 237. [INCSS](#) (Social Security income)
- 238. [INCWELFR](#) (Welfare (public assistance) income)
- 239. [INCINVST](#) (Interest, dividend, and rental income)
- 240. [INCRETIR](#) (Retirement income)
- 241. [INCSUPP](#) (Supplementary Security Income)
- 242. [INCOTHER](#) (Other income)
- 243. [INCEARN](#) (Total personal earned income)
- 244. [POVERTY](#) (Poverty status)
- 245. [MIGRATE1](#) (Migration status, 1 year [general version])
- 246. [MIGRATE1D](#) (Migration status, 1 year [detailed version])
- 247. [MIGPLAC1](#) (State or country of residence 1 year ago)
- 248. [MIGPUMA1](#) (PUMA of residence 1 year ago)
- 249. [MOVEDIN](#) (When occupant moved into residence)
- 250. [VETDISAB](#) (VA service-connected disability rating)
- 251. [DIFFREM](#) (Cognitive difficulty)
- 252. [DIFFPHYS](#) (Ambulatory difficulty)
- 253. [DIFFMOB](#) (Independent living difficulty)
- 254. [DIFFCARE](#) (Self-care difficulty)
- 255. [DIFFSENS](#) (Vision or hearing difficulty)
- 256. [DIFFEYE](#) (Vision difficulty)
- 257. [DIFFHEAR](#) (Hearing difficulty)
- 258. [PWSTATE2](#) (Place of work: state)
- 259. [PWPUMA00](#) (Place of work: PUMA, 2000 onward)
- 260. [TRANWORK](#) (Means of transportation to work)
- 261. [CARPOOL](#) (Carpooling)
- 262. [RIDERS](#) (Vehicle occupancy)
- 263. [TRANTIME](#) (Travel time to work)
- 264. [DEPARTS](#) (Time of departure for work)
- 265. [ARRIVES](#) (Time of arrival at work)
- 266. [GCHOUSE](#) (Own grandchildren living in household)
- 267. [GCMONTHS](#) (Months responsible for grandchildren)
- 268. [GCRESPON](#) (Responsible for grandchildren)
- 269. [REPWTP1](#) (Person replicate weight 1)

- 270. [REPWTP2](#) (Person replicate weight 2)
- 271. [REPWTP3](#) (Person replicate weight 3)
- 272. [REPWTP4](#) (Person replicate weight 4)
- 273. [REPWTP5](#) (Person replicate weight 5)
- 274. [REPWTP6](#) (Person replicate weight 6)
- 275. [REPWTP7](#) (Person replicate weight 7)
- 276. [REPWTP8](#) (Person replicate weight 8)
- 277. [REPWTP9](#) (Person replicate weight 9)
- 278. [REPWTP10](#) (Person replicate weight 10)
- 279. [REPWTP11](#) (Person replicate weight 11)
- 280. [REPWTP12](#) (Person replicate weight 12)
- 281. [REPWTP13](#) (Person replicate weight 13)
- 282. [REPWTP14](#) (Person replicate weight 14)
- 283. [REPWTP15](#) (Person replicate weight 15)
- 284. [REPWTP16](#) (Person replicate weight 16)
- 285. [REPWTP17](#) (Person replicate weight 17)
- 286. [REPWTP18](#) (Person replicate weight 18)
- 287. [REPWTP19](#) (Person replicate weight 19)
- 288. [REPWTP20](#) (Person replicate weight 20)
- 289. [REPWTP21](#) (Person replicate weight 21)
- 290. [REPWTP22](#) (Person replicate weight 22)
- 291. [REPWTP23](#) (Person replicate weight 23)
- 292. [REPWTP24](#) (Person replicate weight 24)
- 293. [REPWTP25](#) (Person replicate weight 25)
- 294. [REPWTP26](#) (Person replicate weight 26)
- 295. [REPWTP27](#) (Person replicate weight 27)
- 296. [REPWTP28](#) (Person replicate weight 28)
- 297. [REPWTP29](#) (Person replicate weight 29)
- 298. [REPWTP30](#) (Person replicate weight 30)
- 299. [REPWTP31](#) (Person replicate weight 31)
- 300. [REPWTP32](#) (Person replicate weight 32)
- 301. [REPWTP33](#) (Person replicate weight 33)
- 302. [REPWTP34](#) (Person replicate weight 34)
- 303. [REPWTP35](#) (Person replicate weight 35)
- 304. [REPWTP36](#) (Person replicate weight 36)
- 305. [REPWTP37](#) (Person replicate weight 37)
- 306. [REPWTP38](#) (Person replicate weight 38)
- 307. [REPWTP39](#) (Person replicate weight 39)
- 308. [REPWTP40](#) (Person replicate weight 40)
- 309. [REPWTP41](#) (Person replicate weight 41)
- 310. [REPWTP42](#) (Person replicate weight 42)

- 311. [REPWTP43](#) (Person replicate weight 43)
- 312. [REPWTP44](#) (Person replicate weight 44)
- 313. [REPWTP45](#) (Person replicate weight 45)
- 314. [REPWTP46](#) (Person replicate weight 46)
- 315. [REPWTP47](#) (Person replicate weight 47)
- 316. [REPWTP48](#) (Person replicate weight 48)
- 317. [REPWTP49](#) (Person replicate weight 49)
- 318. [REPWTP50](#) (Person replicate weight 50)
- 319. [REPWTP51](#) (Person replicate weight 51)
- 320. [REPWTP52](#) (Person replicate weight 52)
- 321. [REPWTP53](#) (Person replicate weight 53)
- 322. [REPWTP54](#) (Person replicate weight 54)
- 323. [REPWTP55](#) (Person replicate weight 55)
- 324. [REPWTP56](#) (Person replicate weight 56)

Variable: "SUBSAMP"

Name:	SUBSAMP
Label:	Subsample number
Variable Text:	<p>SUBSAMP allocates each household to one of 100 subsample replicates, randomly numbered from 0 to 99. Each subsample is nationally representative and preserves all stratification of the sample from which it is drawn. Users who need a representative subset of a sample should use SUBSAMP to select their cases. For example, to randomly extract 10 percent of the cases from a sample, select any 10 of the 100 subsamples.</p> <p>SUBSAMP is a useful tool for carrying out the "subsample replicate" method of standard error estimation. This method involves dividing an IPUMS sample into 100 random subsamples and generating 100 subsample estimates for a given statistic. With these 100 "subsample replicate" estimates, researchers can measure a statistic's variation across all of the subsamples. Due to Census sample designs this method yields a more precise estimate of the standard error of a sample statistic than would be achieved through the application of a theoretical standard error formula. Additional precision in estimating standard errors is generally obtained through the use of replicate weights (see REPWT).</p> <p>SUBSAMP is also used to estimate design factors for selected variables in each IPUMS file from 1880 to 1980 (the Census Bureau provided design factors for the samples from 1990 onward). Design factors allow researchers to account for the sample design effects of clustering and stratification on standard error estimates. For information about the characteristics of the complete samples for each year, from which these subsamples are drawn, see "Sample Designs" [URL omitted from DDI.] and "Sampling Error." Variable: "HHWT"

Name:	HHWT
Label:	Household weight
	<p>HHWT indicates how many households in the U.S. population are represented by a given household in an IPUMS sample.</p> <p>It is generally a good idea to use HHWT when conducting a household-level analysis of any IPUMS sample. The use of HHWT is optional when analyzing one of the "flat" or unweighted IPUMS samples. Flat IPUMS samples include the 1% samples from 1850-1930, all samples from 1960, 1970, and 1980, the 1% unweighted samples from 1990 and 2000, the 10% 2010 sample, and any of the full count 100% census datasets.</p>

Variable Text:	<p>HHWT must be used to obtain nationally representative statistics for household-level analyses of any sample other than those.</p> <p>Users should also be sure to select one person (e.g., PERNUM = 1) to represent the entire household.</p> <p>For further explanation of the sample weights, see "Sample Designs" [URL omitted from DDI.] and "Sample Weights" [URL omitted from DDI.]. See also PERWT for a corresponding variable at the person level, and SLWT for a weight variable used with sample-line records in 1940 1% and 1950.</p>
Concept:	Technical Variables -- HOUSEHOLD
Start Position:	20
End Position:	29
Width:	10
Variable Format:	numeric
Implied Decimal Places:	2
Coder Instructions:	<p>HHWT is a 6-digit numeric variable which indicates how many households in the U.S. population are represented by a given household in an IPUMS sample and has two implied decimals. For example, a HHWT value of 010461 should be interpreted as 104.61. HHWT specific variable codes for missing, edited, or unidentified observations, observations not applicable (N/A), observations not in universe (NIU), top and bottom value coding, etc. are provided below if applicable by Census year (and data sample if specified).</p> <p>User Note: Users should also be sure to select one person (e.g., PERNUM = 1) to represent the entire household when using HHWT.</p> <p>HHWT Specific Variable Codes</p>

Variable: "HHTYPE"

Name:	HHTYPE
Label:	Household Type
	HHTYPE is a constructed variable that mirrors the household type variable that the Census

Variable Text:	<p>Bureau created in its 2000 PUMS sample (see page 6-37 of the 2000 PUMS codebook [URL omitted from DDI.]). With HHTYPE, the IPUMS creates the variable consistently from 1940 onward. A future version of this variable will provide the same categories for all IPUMS samples.</p> <p>HHTYPE classifies all households as either family or nonfamily households. Family households are distinguished from nonfamily households using RELATE. A family household consists of a household head and one or more persons who are related to the household head by birth, marriage, or adoption and who are living together in the same household. According to the household head's SEX and MARST, family households are classified as either a married-couple family or a family headed by a man/woman without a spouse present. Family households with no spouse present include household heads of all marital statuses except married, spouse present (see MARST). Households where an unmarried partner is present are classified as family households only if there are other persons in the household who are related to the household head by birth, marriage, or adoption. Therefore, households containing only a household head and an unmarried partner are coded as nonfamily households. Nonfamily households are distinguished by the sex of the household head and the presence of other unrelated individuals (including partners) living in the household.</p>

Variable: "REPWT"

Name:	REPWT
Label:	Household replicate weights
Variable Text:	<p>REPWT provides 80 separate household-level weights that allow users to generate empirically derived standard errors. Person-level replicate weights are available in REPWTP.</p> <p>More information about replicate weights is available on the IPUMS-USA replicate weights FAQ page [URL omitted from DDI.], in the 2005 ACS Accuracy Statement [URL omitted from DDI.], and in this Census Bureau document [URL omitted from DDI.] written for the Current Population Survey.</p> <p>Calculating the standard error of an estimate enables the construction of a confidence interval around the sample estimate of interest and may also be used in hypothesis testing. In theory, the standard error of an estimate measures the variation of a statistic across multiple samples of a given population. Researchers can use replicate weights to mirror this theoretical approach when only sample data is available, and the resulting standard errors have a higher degree of precision than standard asymptotic standard errors.</p> <p>The 2005-onward ACS and PRCS samples contain eighty replicate weights at the household level (variables named REPWT1 through REPWT80) and eighty at the person level (variables named REPWTP1 through REPWTP80). The Census Bureau produced these weights by using what is known as the successive difference replication (SDR) method. This involves repeated implementations of the initial (full-sample) weighting algorithm, such that full information about the ACS and PRCS samples are available in the replicate weights. Nevertheless, users should use these replicate weights only for generating variance estimates, not for obtaining unique parameter estimates.</p> <p>User Note: The successive difference replication approach (SDR) is different from other methods for creating replicate weights such as balanced repeated replication (BRR) and jackknife estimation, and standard statistical software packages have no built-in method to handle them. However, Stata's jackknife standard error program can be adapted to calculate replicate standard errors for CPS data; see the IPUMS-USA</p>

	<p>replicate weights FAQ page [URL omitted from DDI.] for details.</p> <p>Additionally, it is possible for replicate weights to take negative values for certain cases; again, users should use these weights only for variance estimation purposes and not to obtain independent estimates.</p>

Variable: "STATEICP"

Name:	STATEICP		
Label:	State (ICPSR code)		
Variable Text:	<p>STATEICP identifies the state in which the housing unit was located, using the coding scheme developed by the Inter-University Consortium for Political and Social Research (ICPSR). Using this variable, ICPSR data about states can easily be merged with the IPUMS. The ICPSR scheme orders states geographically by region. Note that the ICPSR regions do not correspond perfectly with the census regions used in the IPUMS variable REGION.</p> <p>State or territory names represent that state or territory's contemporary political boundaries for a given year. Users should familiarize themselves with any historical changes in these boundaries that might affect their research. (Go here [URL omitted from DDI.] for year-by-year maps of states and territories in the U.S.) The IPUMS assigns current state codes to territories that later became states; for example, Arizona Territory in 1880 and 1900 is given the Arizona state code (61). In 1880, Dakota Territory counties are split between areas that ultimately became North and South Dakota.</p>

Variable: "COUNTY"

Name:	COUNTY
Label:	County
Variable Text:	<p>COUNTY identifies the county where the household was enumerated, using the Inter-University Consortium for Political and Social Research (ICPSR) coding scheme. Counties are assigned codes alphabetically within states. The first 3 digits are usually identical to the FIPS county codes used in other datasets; ICPSR adds a digit to the FIPS codes to accommodate change over time. In general, if a county merged with another or was renamed before 1970, it receives an extra digit of 5. Like STATEICP, COUNTY facilitates merging IPUMS data with ICPSR data. COUNTY also identifies areas that were not part of any county, including the independent cities of Virginia and some Indian lands. COUNTY is a state-dependent variable; it must be read with one of the STATE variables (STATEICP, STATEFIP) to distinguish among counties located in different states.</p> <p>Many county boundaries and some county names changed over time. The IPUMS does not impose a uniform county boundary system on the data, so a particular county listed for a given year in the IPUMS should be assumed to have the boundaries that it had in that year.</p> <p>Counties are unavailable in public-use microdata from 1950 onwards. However, it is possible to recover some counties from low-level geographic identifiers. These include State Economic Areas (SEA) in 1950; county groups in 1970 (CNTYGP97) and 1980 (CNTYGP98); and Public Use Microdata Areas (PUMA) from 1990 onwards, including Super-PUMAs (PUMASUPR) in 2000 (COUNTY cannot be constructed for 1960 1 % because geographic information below the state level is not currently available). Counties were identifiable if:</p> <ul style="list-style-type: none"> they were coterminous with a single identifiable SEA, county group, or PUMA; or they contained multiple identifiable SEAs, county groups, or PUMAs, none of which extended into other counties. <p>An Excel spreadsheet [URL omitted from DDI.] provides a list of counties available in each year from 1950 onwards.</p> <p>For municipios, the Puerto Rican statistical equivalent of U.S. counties, enumerated in the 1910-1920 Puerto Rican census, see PRCOUNTA (for an alphabetic version) and PRCOUNTY (for a numeric version).</p> <p>User Note: IPUMS COUNTY codes for Maryland and Nevada depart from the FIPS coding scheme.</p>

	<p>For Maryland, all FIPS codes of 009 and higher (excluding Baltimore City, which is coded as 5100 for IPUMS and 510 for FIPS) are shifted down by two in the IPUMS data. For example, Calvert County is coded as 009 in the FIPS coding scheme, but 0070 in the IPUMS samples.</p> <p>Pershing County, Nevada is assigned FIPS code 270, while historical Ormsby County, Nevada uses FIPS code 250. In the IPUMS samples, Pershing County is instead coded as 0250 and cases from Ormsby County are coded into the Carson City county code of 0510. The historical Riovirgin County takes on county code 0270 in the IPUMS coding scheme.</p> <p>Users will need to adjust the IPUMS codes to match the FIPS codes when merging in data from other sources.</p>
Concept:	Geographic Variables -- HOUSEHOLD
Start Position:	63
End Position:	66

Variable: "MET2013"

Name:	MET2013
Label:	Metropolitan area, 2013 OMB delineations
Variable Text:	<p>A metropolitan area, or metro area, is a region consisting of a large urban core together with surrounding communities that have a high degree of economic and social integration with the urban core.</p> <p>MET2013 identifies metro areas of residence using the 2013 definitions for metropolitan statistical areas (MSAs) from the U.S. Office of Management and Budget (OMB). The 2013 MSAs are the first to be based on 2010 standards and 2010 census data.</p> <p>MET2013 is available only for 2000 and later samples. Another variable, METAREA, identifies metro areas for earlier samples. Both variables are available for samples from 2000 through 2011. The Comparability section [URL omitted from DDI.] summarizes differences between the two variables.</p> <p>Inexact Correspondence with Official Delineations Since 1990, the only sub-state-level geographic information available in census PUMS data is for PUMAs, areas which occasionally straddle official metro area boundaries. Given this limitation, MET2013 cannot identify the exact set of households residing in each metro area.</p> <p>The protocol used by MET2013 is to identify the metro area in which the majority of each PUMA's population resided. If MET2013 identifies a metro area for a given household, it indicates that, for the PUMA in which the household resided, a majority of the PUMA's 2010 population resided in the identified metro area.</p> <p>Match Errors and Code Suppression MET2013's code assignment protocol yields errors of omission (residents of a MSA who are not identified as residents) and errors of commission (non-residents who are identified as residents). PUMAs often nest well within metro area boundaries, resulting in small match errors, if any. For many metro areas, however, especially smaller metro areas, the intersecting PUMAs are a poor match.</p> <p>As an index of mismatch, IPUMS uses the sum of percent omission error (the portion of an MSA's population residing in excluded PUMAs) and percent commission error (the portion of the population in associated PUMAs that did not reside in the MSA).</p> <p>MET2013 reports no code for MSAs where the sum of match errors is 15% or more.</p>

	<p>For each reported MET2013 code, the MET2013ERR variable identifies the level of the sum of errors. Researchers may use MET2013ERR to impose a more restrictive error limit if desired.</p> <p>To compute match errors, IPUMS uses 2010 populations for ACS and PRCS samples and 2000 populations for 2000 samples. For samples that use 2000 PUMA definitions (which includes the 2000 samples and ACS and PRCS samples through 2011), IPUMS estimates the populations of the areas of intersection between 2000 PUMAs and 2013 MSAs by summing the populations of census blocks that had their geographic center in each area.</p> <p>For more detailed information about PUMA-MSA relationships and MET2013 match errors, IPUMS provides these tables (in Excel spreadsheets):</p> <p>2000 5% sample: Crosswalk Between 2013 MSAs and 2000 PUMAs with 2000 Populations [URL omitted from DDI.] MET2013 Omission and Commission Errors by MSA [URL omitted from DDI.]</p> <p>2005-2011 ACS and PRCS samples: Crosswalk Between 2013 MSAs and 2000 PUMAs with 2010 Populations [URL omitted from DDI.] MET2013 Omission and Commission Errors by MSA [URL omitted from DDI.]</p> <p>2012 and later ACS and PRCS samples: Crosswalk Between 2013 MSAs and 2010 PUMAs [URL omitted from DDI.] MET2013 Omission and Commission Errors by MSA [URL omitted from DDI.]</p>

Variable: "MET2013ERR"

Name:	MET2013ERR
Label:	Coverage error in MET2013 variable
Variable	<p>MET2013ERR identifies the level of mismatch error between each MET2013 code and the corresponding 2013 metropolitan statistical area (MSA).</p> <p>MET2013's code assignment protocol yields errors of omission (residents of a MSA who are not identified as residents) and errors of commission (non-residents who are identified as residents). As an index of mismatch, IPUMS uses the sum of percent omission error (the portion of an MSA's population residing in excluded PUMAs) and percent commission error (the portion of the population in associated PUMAs that did not reside in the MSA).</p> <p>For each reported MET2013 code, MET2013ERR identifies the level of the sum of errors.</p> <p>MET2013 reports no code for MSAs where the sum of match errors is 15% or more. Researchers may use MET2013ERR to impose a more restrictive error limit if desired.</p> <p>To compute match errors, IPUMS uses 2010 populations for ACS and PRCS samples and 2000 populations for 2000 samples. For samples that use 2000 PUMA definitions (which includes the 2000 samples and ACS and PRCS samples through 2011), IPUMS estimates the populations of the areas of intersection between 2000 PUMAs and 2013 MSAs by</p>

Text:	<p>summing the populations of census blocks that had their geographic center in each area.</p> <p>For more detailed information about PUMA-MSA relationships and MET2013 match errors, IPUMS provides these tables (in Excel spreadsheets):</p> <p>2000 5% sample: Crosswalk Between 2013 MSAs and 2000 PUMAs with 2000 Populations [URL omitted from DDI.] MET2013 Omission and Commission Errors by MSA [URL omitted from DDI.]</p> <p>2005-2011 ACS and PRCS samples: Crosswalk Between 2013 MSAs and 2000 PUMAs with 2010 Populations [URL omitted from DDI.] MET2013 Omission and Commission Errors by MSA [URL omitted from DDI.]</p> <p>2012 and later ACS and PRCS samples: Crosswalk Between 2013 MSAs and 2010 PUMAs [URL omitted from DDI.] MET2013 Omission and Commission Errors by MSA [URL omitted from DDI.]</p>

Variable: "CITY"

Name:	CITY
Label:	City
Variable Text:	<p>CITY identifies the city of residence for households located in identifiable cities. The Comparability section [URL omitted from DDI.] provides a discussion of factors affecting which cities are identified and how well they are represented in each sample.</p> <p>The cities identified by CITY are generally consistent with U.S. Census "place" definitions. For an explanation and history of the concept, see Chapter 9 in the Census Bureau's Geographic Areas Reference Manual [URL omitted from DDI.].</p>

Variable: "PUMA"

Name:	PUMA
Label:	Public Use Microdata Area
Variable Text:	<p>PUMA identifies the Public Use Microdata Area (PUMA) where the housing unit was located. In the 1990 State sample, PUMAs generally follow the boundaries of county groups, single counties, or census-defined "places". If these areas exceed 200,000 residents, they are divided into as many PUMAs of 100,000+ residents as possible. None of the 1990 State sample PUMAs cross state lines. For the 1990 Metro sample, PUMAs generally follow the boundaries of whole central cities, Metropolitan Statistical Areas, Primary Metropolitan Statistical Areas, or non-metropolitan places (See METAREA for definitions of these terms). If these areas exceed 200,000 residents, they are divided into as many PUMAs of 100,000+ residents as possible. 1990 Metro sample PUMAs sometimes cross state lines; when they do, STATEFIP and STATEICP codes are not available for households in those PUMAs. PUMAs in the 2000 census, 2010 census, and the 2005-onward ACS/PRCS also consist of 100,000+ residents, and they do not cross state lines.</p> <p>Note that PUMA is state-dependent. The codes must be read in combination with one of the STATE variables (STATEFIP or STATEICP). PUMAs are categorized by type (e.g., metropolitan, mixed metro/nonmetro, non-metropolitan) in the variable PUMATYPE. PUMA is similar to the county group variables, CNTYGP97 (1970) and CNTYGP98 (1980), and the State Economic Area variable (SEA) for 1940 and 1950.</p> <p>Note Regarding Multi-Year Samples: The Census Bureau redraws PUMA boundaries every 10 years based on population information gathered from the most recent decennial census. ACS samples incorporate the new PUMAs within a few years of the Decennial Census. See the comparability statement to see which PUMAs are used in each sample. In Multi-Year ACS files, PUMA boundaries depend on the original year the respondent was interviewed (see MULTYEAR). For example in the 2010-2012 3-year ACS sample, respondents from 2010 and 2011 correspond to the Census 2000 based PUMAs, while respondents from 2012 correspond to the Census 2010 based PUMAs.</p>

STRATA Specific Variable Codes

Variable: "CPUMA0010"

Name:	CPUMA0010
Label:	Consistent PUMA, 2000-2010
Variable Text:	<p>The CPUMA0010 variable supplies codes for the 0010 version of ConsPUMAs (Consistent Public Use Microdata Areas). Each 0010 ConsPUMA is an aggregation of one or more 2010 U.S. Census PUMAs (Public Use Microdata Areas) that, in combination, align closely (within a 1% population mismatch tolerance) with a corresponding set of 2000 PUMAs.</p> <p>The 0010 ConsPUMAs are effectively the smallest geographic units that can be consistently identified from the geographic codes available in U.S. Census PUMS from 2000 and later (until 2020 PUMAs take effect sometime after the 2020 Census).</p> <p>See the 0010 ConsPUMA Geographic Tools page [URL omitted from DDI.] for boundary files and detailed composition tables.</p> <p>PUMAs and ConsPUMAs PUMAs are the smallest geographic units identified in U.S. Census Public Use Microdata Samples (PUMS) since 1990. PUMA definitions are altered after each decennial census, so PUMA codes are not consistently comparable across time.</p> <p>To support spatio-temporal analysis of PUMS data, IPUMS defines ConsPUMAs as minimally aggregated sets of PUMAs that, when consolidated, align well across samples.</p> <p>Different versions of ConsPUMAs correspond to different vintages of PUMAs. The 0010 version represents areas that are consistent among 2000 and 2010 PUMAs.</p> <p>A separate variable, CONSPUMA, identifies sets of 1980 county groups and 1990 and 2000 PUMAs that comprise comparable populations for samples from 1980 through 2011.</p> <p>Construction Process and Mismatch Errors To construct 0010 ConsPUMAs, we applied an aggregation algorithm that groups together 2010 PUMAs iteratively until the total population mismatch between each set of 2010 PUMAs and its closest matching set of 2000 PUMAs falls below 1% for both the 2000 and 2010 populations.</p> <p>Specifically, to compute mismatch errors, we first sum, for each intersection between 2000 and 2010 PUMAs, the populations of census blocks that have their center in the intersection according to 2010 Census TIGER/Line files. We then compute the percent omission error (the percent of 2010 PUMAs' population that resides outside of 2000 PUMAs) and percent commission error (the percent of 2000 PUMAs' population that resides outside of 2010 PUMAs) for each ConsPUMA. We sum these two statistics to obtain final mismatch scores.</p> <p>We compute mismatch separately for 2000 and 2010 populations in order to ensure</p>

	<p>that the mismatch between the 2000 and 2010 PUMAs associated with each ConsPUMA is acceptably small (below 1%) at both times.</p> <p>The CPUMA0010 Summary, available via the 0010 ConsPUMA Geographic Tools page [URL omitted from DDI.], provides the mismatch errors for each ConsPUMA. That page also provides a 2000-2010 PUMA crosswalk file that includes the block-based 2000 and 2010 populations for each intersection between PUMAs.</p> <p>The algorithmic approach we use for 0010 ConsPUMAs differs from the process used to construct the original CONSPUMA variable. In that case, researchers visually inspected boundaries and hand selected ConsPUMA sets whose boundaries were closely (if not exactly) in alignment. The visual approach can ensure minimal levels of spatial mismatch, but small areas of mismatch may occasionally contain substantial populations, and large areas of mismatch may contain very small populations. Therefore, the visual approach may occasionally merge PUMAs unnecessarily or fail to merge PUMAs where the population mismatch is in fact large. In contrast, the new population-based algorithm is more consistent and reliable with respect to population mismatch.</p> <p>More information on the exact steps of the algorithm will be provided in a forthcoming paper.</p>

Width:	4
Variable Format:	numeric
Implied Decimal Places:	0
Coder Instructions:	<p>CPUMA0010 is a 4-digit numeric variable identifying aggregations of one or more 2010 PUMAs that, in combination, align closely (within a 1% population mismatch tolerance) with a corresponding set of 2000 PUMAs. Its values range in consecutive sequence from 1 to 1085, and each code is unique for the entire U.S. and Puerto Rico. Therefore, unlike PUMA and county group codes, CPUMA0010 codes are not state-dependent.</p> <p>See the 0010 ConsPUMA Geographic Tools page [URL omitted from DDI.] for boundary files and detailed composition tables.</p>

Variable: "HOMELAND"

Name:	HOMELAND
Label:	American Indian, Alaska Native, or Native Hawaiian homeland area
Variable Text:	<p>HOMELAND indicates whether the household is in a PUMA that includes any Census block that was designated as an American Indian, Alaska Native, or Native Hawaiian homeland area.</p> <p>For Census 2000, the Census Bureau indicated whether or not each census block was within a homeland area. To create the IPUMS homeland variable, we have applied the Census Bureau's block-level measure of homeland status to the PUMAs available in the public use data from Census 2000, Census 2010, and the ACS samples from 2005 onwards.</p> <p>The Census Bureau homeland areas can be either legal or statistical entities. Although they do not have the legal statuses of other areas, the statistical areas included in this measure are judged by local agencies to be substantially meaningful to the local native populations. Specifically:</p> <p>"The legal entities consist of federally recognized American Indian reservations and off-reservation trust land areas, the tribal subdivisions that can divide these entities, state recognized American Indian reservations, Alaska Native Regional Corporations, and Hawaiian home lands. The statistical entities are Alaska Native village statistical areas, Oklahoma tribal statistical areas, tribal designated statistical areas, and state designated American Indian statistical areas. Tribal subdivisions can exist within the statistical Oklahoma tribal statistical areas." (U.S. Census Bureau 2001 [URL omitted from DDI.]</p> <p>The boundaries of these places do not follow state or local administrative lines because of the history of government-to-government relations between tribes and the federal government.</p> <p>The overlap between the Census Bureau definition of homelands and the PUMAs which overlap those areas is far from perfect, as shown in the following map: [Image omitted from DDI.] [URL omitted from DDI.]</p> <p>However, substantive research has shown that the PUMA-based IPUMS measure has substantial predictive power (Liebler, Carolyn A. 2010. "Homelands and Indigenous Identities in a Multiracial Era" Social Science Research 39:596-609).</p> <p>Specific descriptions of the "legal and statistical American Indian, Alaska Native, and native Hawaiian entities for which the U.S. Census Bureau provides data for Census 2000" can be found here [URL omitted from DDI.].</p> <p>Block-level maps of American Indian, Alaska Native, Hawaiian Home Lands as of Census 2000 are available here [URL omitted from DDI.].</p>

Variable: "GQ"

Name:	GQ
Label:	Group quarters status
Variable Text:	<p>GQ classifies all housing units as falling into one of three main categories: households, group quarters, or vacant units. It also identifies fragmentary sample units for 1850-1930 (see below). In all years, the data available about a person and their co-residents depend on whether the person lives in a household or in group quarters. Households are sampled as units, meaning that everyone in the household is included in the sample, and most household-level variables are available. People living in group quarters are generally sampled as individuals; other people in their unit may or may not be included in the sample, and there is no way of linking co-residents' records to one another. If, however, a sampled person in group quarters was living with relatives, the related group was sampled for 1850-1930. Most household-level variables are not available for group quarters or for vacant units.</p> <p>Group quarters are largely institutions and other group living arrangements, such as rooming houses and military barracks. The definitions vary from year to year, but the pre-1940 samples have generally used a definition of group quarters that includes units with 10 or more individuals unrelated to the householder. See the comparability discussion below and "Sample Designs" [URL omitted from DDI.] for more details about changing definitions of group quarters. Group-quarters types are identified in further detail by GQTYPE and GQFUNDS.</p>

Variable: "FARMPROD"

Name:	FARMPROD
Label:	Sales of farm products
Variable Text:	<p>FARMPROD, which applies primarily to rural households, reports the previous year's gross sales of farm produce in contemporary dollars. For censuses, the reference period is the previous calendar year; for the ACS and the PRCS, it is the past 12 months. The Census Bureau used this variable to determine farm status (see FARM).</p> <p>In 1960, not all households received this question, and only households outside cities with 50,000+ residents in the IPUMS include the question. Such cases accurately represent proportional distributions but not correct absolute numbers. See SAMP1960 for instructions on making appropriate corrections to derive absolute numbers for the total population outside cities with 50,000+ residents.</p>

Variable: "ACREHOUS"

Name:	ACREHOUS
Label:	House acreage
Variable Text:	<p>In the U.S. census and ACS samples, ACREHOUS indicates whether a single-family house or mobile home was located on 10+ acres.</p> <p>In the Puerto Rican samples in 1980 and 1990, ACREHOUS indicates whether a single-family house or mobile home was located on 3+ cuerdas. In the Puerto Rican sample in 2000 and the PRCS, ACREHOUS indicates whether a single-family house or mobile home was located on 10+ cuerdas.</p> <p>Users Note The traditional unit of land area in Puerto Rico is the cuerda. The cuerda is equal to about 3930 square meters, 4700 square yards, or 0.971 acres. Because the cuerda and the acre are so close to being equal, they are often treated informally as being equal. Mainlanders sometimes call the unit the "Spanish Acre." The IPUMS has preserved the units for the mainland U.S. as acres and Puerto Rico as cuerdas.</p>

OWCOST is the derived sum of payments for mortgages, deeds of trust, contracts to purchase, or similar debts on the property (including payments for the first mortgage, second mortgages, home equity loans, and other junior mortgages); real estate taxes; fire, hazard, and flood insurance on the property; utilities (electricity, gas, and water and sewer); and fuels (oil, coal, kerosene, wood, etc.). It also includes, where appropriate, the monthly condominium fee for condominiums and mobile home costs (installment loan payments, personal property taxes, site rent, registration fees, and license fees). OWCOST specific variable codes for missing, edited, or unidentified observations, observations not applicable (N/A), observations not in universe (NIU), top and bottom value coding, etc. are provided below by Census year (and data sample if specified).</p> <p>User Note: The components of this variable are available separately via CONDOFEE, COSTELEC, COSTFUEL, MORTAMT1, MORTAMT2, MORTOTAL, COSTWATR, COSTGAS, PROPTXIN, PROPINSR, and RENT (See Description for details regarding the construction of OWCOST).</p> <p>User Note: Amounts are expressed in contemporary dollars, and users studying change over time must adjust for inflation (See Description). The exception is the ACS/PRCS multi-year files, where all dollar amounts have been standardized to dollars as valued in the final year of data included in the file (e.g., 2007 dollars for the 2005-2007 3-year file)</p> <p>OWNCOST Specific Variable Codes 99999 = Not in universe</p>

Variable: "RENT"

Name:	RENT
Label:	Monthly contract rent
	<p>RENT reports the amount of the household's monthly contract rent payment. For vacant units (included beginning in 1970), RENT reports the amount for which landlord expected to rent the unit. This amount includes utilities, fuels, etc. only if they were included in the rent contract. Respondents were to report the full contract amount, even if payments were delinquent or made by someone outside the household. See</p>

Variable Text:	<p>also RENTGRS.</p> <p>Amounts are expressed in contemporary dollars, and users studying change over time must adjust for inflation. See INCTOT for Consumer Price Index adjustment factors. The exception is the ACS/PRCS multi-year files, where all dollar amounts have been standardized to dollars as valued in the final year of data included in the file (e.g., 2007 dollars for the 2005-2007 3-year file). Additionally, more detail may be available than exists in the original ACS samples.</p> <p>User Note: The traditional unit of land area in Puerto Rico is the cuerda. The cuerda is equal to about 3930 square meters, 4700 square yards, or 0.971 acres. Because the cuerda and the acre are so close in size, they are often treated informally as being equal. Mainlanders sometimes call the cuerda the "Spanish Acre." The IPUMS has preserved the units for the mainland U.S. as acres and for Puerto Rico as cuerdas.</p>

For later years, COSTGAS reports each rented or owned housing unit's annual gas costs, again excluding amounts included in contract rent or other types of payments. In 1970 and 1980, units that used no gas can be identified. For the 1990-2000 censuses and the ACS/PRCS, the form combines the categories "no charge" and "gas not used." The ACS/PRCS includes an additional category of "included in electricity payment."</p> <p>COSTGAS amounts for renters are included in the gross monthly rental cost reported in RENTGRS. Census Bureau research comparing respondents' reported costs with utility company records indicates that respondents tend to overstate their costs.</p> <p>In 1970, the universe for the U.S. Census samples specifies renter-occupied units rented for cash rent, not one-family houses on 10+ acres and not group quarters; however in the Puerto Rican census of 1970, this specification is for renter-occupied units rented for cash rent, not one-family houses on 3+ cuerdas, and not group quarters.</p> <p>Amounts are expressed in contemporary dollars, and users studying change over time must adjust for inflation. See INCTOT for Consumer Price Index adjustment factors. The exception is the ACS/PRCS multi-year files, where all dollar amounts have been standardized to dollars as valued in the final year of data included in the file (e.g., 2007 dollars for the 2005-2007 3-year file). Additionally, more detail may be available than exists in the original ACS samples.</p>

	<p>User Note</p> <p>The traditional unit of land area in Puerto Rico is the cuerda. The cuerda is equal to about 3930 square meters, 4700 square yards, or 0.971 acres. Because the cuerda and the acre are so close to being equal, they are often treated informally as being equal. Mainlanders sometimes call the unit the "Spanish Acre." The IPUMS has preserved the units for the mainland U.S. as acres and Puerto Rico as cuerdas.</p>

Variable: "FOODSTMP"

Name:	FOODSTMP
Label:	Food stamp reciprocity
	FOODSTMP indicates whether anyone in the household received Food Stamps (now called the Supplemental Nutrition Assistance Program, or SNAP) at any time in the past 12 months. The Food Stamp Act of 1977 was enacted to increase the food purchasing power of eligible households through the use of coupons to purchase food. The Food and Nutrition Service of the U.S. Department of Agriculture (USDA) administers the Food

Variable Text:	Stamp Program/SNAP through state and local welfare offices. The Food Stamp Program/SNAP is the major national income support program which provides benefits to all low-income and low-resource households, regardless of the person's characteristics (e.g., sex, age, disability, etc.). Although all of the ACS questionnaires 2007 and before asked respondents to report the total value of Food Stamps received in the past 12 months, this information is made publicly available only in the ACS and PRCS variable FDSTPAMT, which is available only from 2005-2007.

Variable: "VALUEH"

Name:	VALUEH
Label:	House value
	VALUEH reports the value of housing units in contemporary dollars. For 1930, 1940, and from 2008 onward, VALUEH is a continuous variable. The other years report the midpoint of an interval; see codes and frequencies for intervals.

Variable Text:	<p>User Note: Universe shifts and changing methods of determining value complicate use of this variable for comparisons across years. Furthermore, dollar amounts were intervalled differently for each year, and the top codes changed. Users must adjust for the effects of inflation; see INCTOT for Consumer Price Index adjustment factors.</p> <p>User Note: The traditional unit of land area in Puerto Rico is the cuerda. The cuerda is equal to about 3930 square meters, 4700 square yards, or 0.971 acres. Because the cuerda and the acre are so close to being equal, they are often treated informally as being equal. Mainlanders sometimes call the unit the "Spanish Acre." The IPUMS has preserved the units for the mainland U.S. as acres and Puerto Rico as cuerdas.</p>

Variable: "SSMC"

Name:	SSMC								
Label:	Same-sex married couple								
Variable Text:	<p>SSMC reports whether the head of household and spouse are a same-sex married couple. Beginning in the 2013 ACS/PRCS, same-sex married couples are included in the "married spouse present" category. As well, beginning in 2013, family household and married-couple families include same-sex married couples.</p> <p>Prior to the 2013 ACS/PRCS, same-sex married couples were recoded by the Census Bureau from married to unmarried partners. The 2012 ACS/PRCS included a data quality flag identifying same-sex married couples that had been recoded (QRELATE = 9 "Same sex spouse changed to unmarried partner").</p> <p>User Note: Same-sex married couples are only shown as the householder and spouse, and are not included in subfamilies. Respondents with an SSMC value of 1 were logically allocated as a same-sex married-couple, even though they were missing valid responses for SEX or RELATE. See the SSMC and Family Interrelationship page [URL omitted from DDI.] for information on how the IPUMS-USA family interrelationship variables interact with same-sex married couple households.</p>

Variable: "NFAMS"

Name:	NFAMS
Label:	Number of families in household
Variable Text:	<p>NFAMS is a constructed variable that counts the number of families within each unit. A "family" is any group of persons related by blood, adoption, or marriage. An unrelated individual is considered a separate family. Thus, a household consisting of a widow and her servant contains two families; a household consisting of a large, multiple-generation extended family with no boarders, lodgers, or servants counts as a single family.</p> <p>The universe for this variable, in the U.S. censuses from 1850 to 1930 and the 1940 100% dataset is all sample units, which relies on SAMPRULE. Additionally, the universe for this variable in the 1910-1920 Puerto Rican censuses is SAMPRULE not equal to 4.</p>

Variable: "NSUBFAM"

Name:	NSUBFAM
Label:	Number of subfamilies in household
Variable Text:	<p>NSUBFAM indicates the number of subfamilies (if any) within the housing unit each person belongs. All individuals who are not part of a subfamily, including all residents of group quarters, receive a code of 0. See SUBFAM for a person-level variable identifying the members of each subfamily.</p> <p>NSUBFAM is analogous to NFAMS in that it provides the number of family units within each household, but the specific family unit measured by each is different. NFAMS counts as one family all individuals who are related to the household head, whether or not they belong to a subfamily; NSUBFAM does not count household heads or their relatives unless they belong to a subfamily. Additionally, NFAMS counts as separate family units all individuals who are unrelated to the head and who live without a spouse or children; NSUBFAM does not. However, all unrelated subfamilies are counted as separate family units in both NFAMS and NSUBFAM.</p> <p>For more information on subfamilies and their measurement, see Subfamily Overview [URL omitted from DDI.].</p>

Variable: "NCOUPLES"

Name:	NCOUPLES
Label:	Number of married couples in household
	NCOUPLES is a constructed variable (using SPLOC) that counts the number of married couples within each unit. Units with no married couples present are coded "0." For persons in households, NCOUPLES indicates the number of identified married couples in the household; for persons in group quarters in the period before 1940, NCOUPLES indicates the number of identified married couples in any group of related individuals.

Variable Text:	<p>The universe for this variable from 1850 to 1930 and the 1940 100% dataset is all sample units, which relies on SAMPRULE. Additionally, the universe for this variable in the 1910-1920 Puerto Rican censuses is SAMPRULE not equal to 4.</p> <p>Note regarding Same-Sex Married Couples: The 2013 ACS sample represents the first unedited inclusion of same-sex married couples, however these couples are only identifiable if one of the partners is the Householder (see SSMC). Similarly, NCOUPLES is not able to count same-sex married couples that do not include the Householder.</p>

Variable: "MULTGEN"

Name:	MULTGEN
Label:	Multigenerational household [general version]
	<p>MULTGEN identifies the number of distinct generations contained in each household. While the Census Bureau defines multigenerational households as those containing three or more generations, the detail provided in MULTGEN allows researchers more flexibility.</p> <p>Both general and detailed versions of MULTGEN are available. The general version indicates how many generations are present in the house; the detailed version provides more nuance within each general category.</p> <p>The number of generations was identified in two ways. First, relationships to the householder (RELATE) were divided into the following generational categories (general codes only):</p> <ul style="list-style-type: none">(1) Parent, Parent-in-law(2) Householder, Spouse, Sibling, Sibling-in-law(3) Child, Child-in-law

Variable Text:	<p>(4) Grandchild The number of generations is simply the number of these categories represented in the household.</p> <p>Second, the family inter-relationship pointer variables were examined to provide additional information on "other relatives" and nonrelatives of the householder. For example, two generations exist when someone is linked to a parent as identified by POPLOC and MOMLOC; three generations exist when that parent also has a parent in the household. Family interrelationship pointer variables were not able to be created in the 2010 Decennial Census. As a result, multigenerational households can only be identified through the Census Bureau's definitions.</p> <p>The following table provides more detail on the categories of MULTGEN:</p> <p>HTML PUBLIC "-//W3C//DTD HTML 4.01 Transitional//EN" "http://www.w3.org/TR/html4/loose.dtd"></p> <p>multgen_table</p> <p>Additional note on the Census Bureau's definition of multigenerational households: Information on multigenerational households has been available in the original Census Bureau data only since the 2008 ACS/PRCS. The Census Bureau identifies multigenerational households only through respondents' relationships to the householder. The presence of one of the following relationship combinations caused the household to be coded as multigenerational:</p> <ul style="list-style-type: none"> (1) householder, householder's child, and householder's grandchild (2) householder's parent, householder, and householder's child (3) householder's parent-in-law, householder, and householder's child <p>Thus subfamilies [URL omitted from DDI.] do not need to be present for a household to be classified as multigenerational by the Census Bureau's definition. In example (1) above, the grandchild need not be the child of the householder's child. And a household containing only the three people in example (3) would contain no subfamilies. In fact, the householder's child in example (3) could be the result of a previous marriage, such that the householder's parent-in-law is not actually the grandchild of the parent-in-law.</p> <p>As outlined above, this definition does not exhaust three-generation households. While it is sufficient to capture most three-generation households, expanding the range of allowable relationship combinations and examining probable family interrelationships identifies more three-generation households. These receive the code of 32.</p>

Variable: "REPWT1"

Name:	REPWT1
Label:	Household replicate weight 1
Variable Text:	<p>Replicate weights allow users to generate empirically derived standard errors. Calculating the standard error of an estimate enables the construction of a confidence interval around the sample estimate of interest and may also be used in hypothesis testing.</p> <p>In theory, the standard error of an estimate measures the variation of a statistic across multiple samples of a given population. Researchers can use replicate weights to mirror this theoretical approach when only sample data is available.</p> <p>The 2005-2007 ACS and PRCS samples contains eighty replicate weights at the household level (variables named REPWT1 through REPWT80) and eighty at the person level (variables named REPWTP1 through REPWTP80). The Census Bureau produced these weights by using what is known as the Successive Difference Replication (SDR) method, which involves repeated implementations of the initial weighting algorithm.</p> <p>To calculate standard errors, users should generate 80 separate estimates using each of the 80 replicate weights. Along with the single full-sample estimate that can be generated using PERWT or HHWT, this information can then be used to compute the standard error of the estimate with this formula provided by the Census Bureau:</p> <p>[Image omitted from DDI.]</p> <p>where r is the number of replicates (1-80), X is the full-sample estimate based on the unbiased weights (either PERWT or HHWT), X_r is the replicate estimate based on the r-th set of replicate weights.</p> <p>Once calculated, the standard error is useful for constructing confidence intervals and in hypothesis testing.</p> <p>This method is a more precise alternative to the method of generating standard errors described in the SUBSAMP variable description. SUBSAMP allows users to divide an IPUMS sample into 100 component parts and then to generate subsample estimates for each of those parts. Replicate weights allow users to generate 80 replicate estimates, each of which uses full sample data. Thus, instead of calculating the variation among 100 small subsample estimates as one would do using SUBSAMP, replicate weights allow for calculating the variation among eighty full-size estimates, using REPWT(P)1-REPWT(P)80.</p> <p>Standard errors computed using replicate weights are almost always more accurate than those computed using subsamples. Estimates generated with replicate weights have more cases involved since each estimate uses all sample data rather than 1/100th of all of the sample data. Furthermore, the replicate weights themselves are constructed by the Census Bureau with full sampling information that is not available in samples prior to 2005. Additional information about replicate weights is available in the 2005 ACS Accuracy Statement [URL omitted from DDI.].</p> <p>User Note: The successive difference replication approach (SDR) is different from other methods for creating replicate weights such as balanced repeated replication (BRR) and jackknife estimation.</p>

Coder Instructions:	This is a 6-digit numeric variable with 0 implied decimal places

Variable: "REPWT16"

Name:	REPWT16
Label:	Household replicate weight 16
Variable Text:	Extracts include the REPWT1-REPWT80 variables if users choose REPWT during the extract process.
Concept:	Technical Variables -- HOUSEHOLD
Start Position:	294
End Position:	299
Width:	6
Variable Format:	numeric
Implied Decimal Places:	0

Coder Instructions:	This is a 6-digit numeric variable with 0 implied decimal places
---------------------	--

Variable: "REPWT17"

Name:	REPWT17
Label:	Household replicate weight 17
Variable Text:	Extracts include the REPWT1-REPWT80 variables if users choose REPWT during the extract process.
Concept:	Technical Variables -- HOUSEHOLD
Start Position:	300
End Position:	305
Width:	6
Variable Format:	numeric
Implied Decimal Places:	0
Coder Instructions:	This is a 6-digit numeric variable with 0 implied decimal places

Variable: "REPWT18"

Name:	REPWT18
Label:	Household replicate weight 18
Variable Text:	Extracts include the REPWT1-REPWT80 variables if users choose REPWT during the extract process.
Concept:	Technical Variables -- HOUSEHOLD
Start Position:	306
End Position:	311
Width:	6

Variable Format:	numeric
Implied Decimal Places:	0
Coder Instructions:	This is a 6-digit numeric variable with 0 implied decimal places

Variable: "REPWT19"

Name:	REPWT19
Label:	Household replicate weight 19
Variable Text:	Extracts include the REPWT1-REPWT80 variables if users choose REPWT during the extract process.
Concept:	Technical Variables -- HOUSEHOLD
Start Position:	312
End Position:	317
Width:	6
Variable Format:	numeric
Implied Decimal Places:	0
Coder Instructions:	This is a 6-digit numeric variable with 0 implied decimal places

Variable: "REPWT20"

Name:	REPWT20
Label:	Household replicate weight 20
Variable Text:	Extracts include the REPWT1-REPWT80 variables if users choose REPWT during the extract process.
Concept:	Technical Variables -- HOUSEHOLD

Start Position:	318
End Position:	323
Width:	6
Variable Format:	numeric
Implied Decimal Places:	0
Coder Instructions:	This is a 6-digit numeric variable with 0 implied decimal places

Variable: "REPWT21"

Name:	REPWT21
Label:	Household replicate weight 21
Variable Text:	Extracts include the REPWT1-REPWT80 variables if users choose REPWT during the extract process.
Concept:	Technical Variables -- HOUSEHOLD
Start Position:	324
End Position:	329
Width:	6
Variable Format:	numeric
Implied Decimal Places:	0
Coder Instructions:	This is a 6-digit numeric variable with 0 implied decimal places

Variable: "REPWT22"

Name:	REPWT22
-------	---------

Label:	Household replicate weight 22
Variable Text:	Extracts include the REPWT1-REPWT80 variables if users choose REPWT during the extract process.
Concept:	Technical Variables -- HOUSEHOLD
Start Position:	330
End Position:	335
Width:	6
Variable Format:	numeric
Implied Decimal Places:	0
Coder Instructions:	This is a 6-digit numeric variable with 0 implied decimal places

Variable: "REPWT23"

Name:	REPWT23
Label:	Household replicate weight 23
Variable Text:	Extracts include the REPWT1-REPWT80 variables if users choose REPWT during the extract process.
Concept:	Technical Variables -- HOUSEHOLD
Start Position:	336
End Position:	341
Width:	6
Variable Format:	numeric
Implied Decimal Places:	0

Coder Instructions:	This is a 6-digit numeric variable with 0 implied decimal places
---------------------	--

Variable: "REPWT24"

Name:	REPWT24
Label:	Household replicate weight 24
Variable Text:	Extracts include the REPWT1-REPWT80 variables if users choose REPWT during the extract process.
Concept:	Technical Variables -- HOUSEHOLD
Start Position:	342
End Position:	347
Width:	6
Variable Format:	numeric
Implied Decimal Places:	0
Coder Instructions:	This is a 6-digit numeric variable with 0 implied decimal places

Variable: "REPWT25"

Name:	REPWT25
Label:	Household replicate weight 25
Variable Text:	Extracts include the REPWT1-REPWT80 variables if users choose REPWT during the extract process.
Concept:	Technical Variables -- HOUSEHOLD
Start Position:	348
End Position:	353
Width:	6

Variable Format:	numeric
Implied Decimal Places:	0
Coder Instructions:	This is a 6-digit numeric variable with 0 implied decimal places

Variable: "REPWT26"

Name:	REPWT26
Label:	Household replicate weight 26
Variable Text:	Extracts include the REPWT1-REPWT80 variables if users choose REPWT during the extract process.
Concept:	Technical Variables -- HOUSEHOLD
Start Position:	354
End Position:	359
Width:	6
Variable Format:	numeric

Variable: "PERNUM"

Name:	PERNUM
Label:	Person number in sample unit
Variable Text:	PERNUM numbers all persons within each household consecutively in the order in which they appear on the original census or survey form. When combined with YEAR, DATANUM, and SERIAL, PERNUM uniquely identifies each person within the IPUMS.
Concept:	Technical Variables -- PERSON
Start Position:	685

End Position:	688
Width:	4
Variable Format:	numeric
Implied Decimal Places:	0
Coder Instructions:	PERNUM is a 4-digit numeric variable which numbers all persons within each household consecutively in the order in which they appear on the original census or survey form. PERNUM specific variable codes for missing, edited, or unidentified observations, observations not applicable (N/A), observations not in universe (NIU), top and bottom value coding, etc. are provided below if applicable by Census year (and data sample if specified).

Variable: "PERWT"

Name:	PERWT
Label:	Person weight
Variable Text:	<p>PERWT indicates how many persons in the U.S. population are represented by a given person in an IPUMS sample.</p> <p>It is generally a good idea to use PERWT when conducting a person-level analysis of any IPUMS sample. The use of PERWT is optional when analyzing one of the "flat" or unweighted IPUMS samples. Flat IPUMS samples include the 1% samples from 1850-1930, all samples from 1960, 1970, and 1980, the 1% unweighted samples from 1990 and 2000, the 10% 2010 sample, and any of the full count 100% census datasets. PERWT must be used to obtain nationally representative statistics for person-level analyses of any sample other than those.</p> <p>For further explanation of the sample weights, see "Sample Designs" [URL omitted from DDI.] and "Sample Weights" [URL omitted from DDI.]. See also HHWT for a corresponding variable at the household level, and SLWT for a weight variable used with sample-line records in 1940 and 1950.</p>
Concept:	Technical Variables -- PERSON
Start Position:	689
End	

Position:	698
Width:	10
Variable Format:	numeric
Implied Decimal Places:	2
Coder Instructions:	<p>PERWT is a 6-digit numeric variable which indicates how many persons in the U.S. population are represented by a given person in an IPUMS sample and has two implied decimals. For example, a PERWT value of 010461 should be interpreted as 104.61. PERWT specific variable codes for missing, edited, or unidentified observations, observations not applicable (N/A), observations not in universe (NIU), top and bottom value coding, etc. are provided below if applicable by Census year (and data sample if specified).</p> <p>PERWT Specific Variable Codes</p>

Variable: "SLWT"

Name:	SLWT
Label:	Sample-line weight
Variable Text:	<p>SLWT reports the number of persons in the general population represented by each sample-line person in 1940 and 1950.</p> <p>SLWT must be used in any analysis that relies on one of the "sample line" variables from the 1940 and 1950 censuses. Sample line variables can be identified by looking at the universe tab for the variable of interest. The use of SLWT is not necessary in analyses of 1940 and 1950 data that do not use any sample line variables.</p> <p>The use of SLWT is particularly critical in 1940, because the sample-line records in that year are not representative. In 1950, sample line persons are a flat 1-in-330 sample of the population. In both 1940 and 1950, SLWT has a value of zero for non-sample-line persons.</p> <p>An alternative to using SLWT is to use the SELFWTSL variable to select an un-weighted represented subset of sample line cases.</p> <p>For a further explanation of sample weights, see "Sample Line Characteristics in 1940 and 1950" [URL omitted from DDI.] and "Sample Weights" [URL omitted from DDI.].</p>
Concept:	Technical Variables -- PERSON

Start Position:	699
End Position:	708
Width:	10
Variable Format:	numeric
Implied Decimal Places:	2
Coder Instructions:	<p>SLWT is a 6-digit numeric variable which indicates the number of persons in the general population represented by each sample-line person in the 1940 and 1950 Census and must be used in any analysis that relies on one of the "sample line" variables from these censuses. Similar to PERWT, SLWT has two implied decimals. For example, a SLWT value of 010461 should be interpreted as 104.61. SLWT specific variable codes for missing, edited, or unidentified observations, observations not applicable (N/A), observations not in universe (NIU), top and bottom value coding, etc. are provided below if applicable by Census year (and data sample if specified).</p> <p>SLWT Specific Variable Codes</p>

Variable: "REPWTP"

Name:	REPWTP
Label:	Person replicate weights
Variable	<p>REPWTP provides 80 separate person-level weights that allow users to generate empirically derived standard errors. Household-level replicate weights are available in REPWT.</p> <p>More information about replicate weights is available on the IPUMS-USA replicate weights FAQ page [URL omitted from DDI.], in the 2005 ACS Accuracy Statement [URL omitted from DDI.], and in this Census Bureau document [URL omitted from DDI.] written for the Current Population Survey.</p> <p>Calculating the standard error of an estimate enables the construction of a confidence interval around the sample estimate of interest and may also be used in hypothesis testing. In theory, the standard error of an estimate measures the variation of a statistic across multiple samples of a given population. Researchers can use replicate weights to mirror this theoretical approach when only sample data is available, and the resulting standard errors have a higher degree of precision than standard asymptotic standard errors.</p> <p>The 2005-onward ACS and PRCS samples contain eighty replicate weights at the</p>

Text:	<p>household level (variables named REPWT1 through REPWT80) and eighty at the person level (variables named REPWTP1 through REPWTP80). The Census Bureau produced these weights by using what is known as the successive difference replication (SDR) method. This involves repeated implementations of the initial (full-sample) weighting algorithm, such that full information about the ACS and PRCS samples are available in the replicate weights. Nevertheless, users should use these replicate weights only for generating variance estimates, not for obtaining unique parameter estimates.</p> <p>User Note: The successive difference replication approach (SDR) is different from other methods for creating replicate weights such as balanced repeated replication (BRR) and jackknife estimation, and standard statistical software packages have no built-in method to handle them. However, Stata's jackknife standard error program can be adapted to calculate replicate standard errors for CPS data; see the IPUMS-USA replicate weights FAQ page [URL omitted from DDI.] for details.</p> <p>Additionally, it is possible for replicate weights to take negative values for certain cases; again, users should use these weights only for variance estimation purposes and not to obtain independent estimates.</p>
Concept:	Technical Variables -- PERSON
Start Position:	709
End Position:	709
Width:	1
Variable Format:	numeric
Implied Decimal Places:	0
Coder Instructions:	<p>When REPWTP is selected for data extraction, 80 replicate weights, REPWTP1-REPWTP80 are included in the data extract. REPWTP1-REPWTP80 are 4-digit numeric variables used to empirically derive standard errors. Selecting replicate weights will dramatically increase the size and processing time of extracts; users should request them only if they plan to use them. REPWTP specific variable codes for missing, edited, or unidentified observations, observations not applicable (N/A), observations not in universe (NIU), top and bottom value coding, etc. are provided below if applicable by Census year (and data sample if specified).</p> <p>REPWTP Specific Variable Codes</p>

Variable: "RELATE"

Name:	RELATE
-------	--------

Label:	Relationship to household head [general version]								
Variable Text:	<p>RELATE describes an individual's relationship to the head of household or householder. Beginning in 1880, data on household relationship was asked of every person. The general relationship code is reasonably comparable across years. The detailed code makes distinctions that cannot be made in all years.</p> <p>The relationship codes are divided into two categories: relatives (codes 1-10) and non-relatives (codes 11-13). In general, the codes for relatives are self-explanatory. The non-relative codes are divided into three groups: "Partner, Friend, Visitor," roughly described as persons who do not pay or work for their accommodations (unless they share ownership); "Other Non-Relatives," including those persons paying or working for accommodations; and "Institutional Inmates." See the comparability discussion for further information about the coding scheme.</p> <p>RELATE is not available for 1850-1870, but the IPUMS variable IMPREL produces similar results. As a convenience, the extract system is set up so that users may include RELATE in extracts of the 1850-1870 samples. In those years, RELATE contains the information that is documented in the IMPREL variable description.</p>

Name:	RACE
Label:	Race [general version]

Variable Text:	<p>With the exception of the 1970-1990 Puerto Rican censuses, RACE was asked of every person in all years. The concept of race has changed over the more than 150 years represented in the IPUMS. Currently, the Census Bureau and others consider race to be a sociopolitical construct, not a scientific or anthropological one. Many detailed RACE categories consist of national origin groups. Beginning in 2000, the race question changed substantially to allow respondents to report as many races as they felt necessary to describe themselves. In earlier years, only one race response was coded.</p> <p>IPUMS offers several variables describing the answer(s) to the race question. RACE provides the full detail given by the respondent and/or released by the Census Bureau; it is not always historically compatible (see comparability discussion below). Users primarily interested in historical compatibility should consider using RACESING, and should consult the race code relationship page, Relationship between RACE and RACESING codes [URL omitted from DDI.], for detail about how the RACE and RACESING codes are related.</p> <p>In addition, specific combinations of major races can be discerned using the following bivariate indicators of whether a particular race group was reported: RACAMIND, RACASIAN, RACBLK, RACOTHER, RACPACIS, and RACWHT. RACNUM indicates the total number of major race groups reported for an individual. The information contained in the bivariate indicators and in RACNUM is integrated into the detailed version of RACE. Users primarily interested in historical comparability should consider using RACESING and/or the accompanying variables PROBAIL, PROBAPI, PROBBLK, PROBOTH, and PROBWHT. Note that Hispanic origin is assessed through separate questioning (see HISPAN).</p> <p>Prior to 1960, the census enumerator was responsible for categorizing persons and was not specifically instructed to ask the individual his or her race. In 1970 and later years, an individual's race was reported by someone in the household or group quarters. In the 1990 U.S. census, the 2000 U.S. and Puerto Rican censuses, the ACS, and the PRCS respondents were specifically asked what race the person "considers himself/herself" to be, although such self-description was more or less operative since 1960.</p> <p>User Note: Race questions were not asked in the Puerto Rican censuses of 1970, 1980, and 1990. They were asked in the 1910 and 1920 Puerto Rican censuses, the 2000-2010 Puerto Rican censuses, and the PRCS.</p>

996	2+ races, n.e.c. (CPS)

Variable: "HISPAN"

Name:	HISPAN
Label:	Hispanic origin [general version]
	HISPAN identifies persons of Hispanic/Spanish/Latino origin and classifies them according to their country of origin when possible. Origin is defined by the Census Bureau as ancestry, lineage, heritage, nationality group, or country of birth. People of Hispanic origin may be of any race; see RACE for a discussion of coding issues involved. Users should note that race questions were not asked in the Puerto Rican censuses of 1970, 1980 and 1990.

Variable Text:	<p>They were asked in the 1910 and 1920 Puerto Rican censuses, and in the 2000 and 2010 Puerto Rican census and the PRCS. However, questions assessing Spanish/Hispanic origin were not asked in the Puerto Rican censuses prior to 2000.</p> <p>The HISPAN general code covers country-of-origin classifications common to all years; the detailed code distinguishes additional groups and subgroups. See HISPRULE for details on how country of origin information was assigned prior to 1980.</p>

Variable: "ANCESTR1"

Name:	ANCESTR1
Label:	Ancestry, first response [general version]
	ANCESTR1 provides the respondent's self-reported ancestry or ethnic origin. In all years

Variable Text:	<p>except 1990 and 2000, respondents could give as many ancestries as they saw fit. ANCESTR1 records the first response, while ANCESTR2 records the second response, if one exists. Additional responses were ignored, with the exception of 17 "three-origin" combination codes retained in the 1980 samples; these are described in section A of the comparability discussion below. Some compound responses such as "Pennsylvania Dutch" or "French Canadian" were treated as a single response. Respondents could give virtually any response, though they were instructed not to give a religion (the census is not allowed to collect information on religion). A few responses were not categorized in the samples and were instead coded "Uncodable," "Deferred Cases," or "Other." These uncategorized responses were usually religions.</p> <p>If a respondent listed both a broad category and a subset of that category, such as "German-Bavarian," the Census Bureau used only the subset and ignored the broad category.</p> <p>The IPUMS generally follows the Census Bureau's practice of coding responses alphabetically within geographic regions. Note that some responses, especially within the NORTH AMERICAN (NON-HISPANIC) geographic region, denote people such as "African-American," "French-Canadian," or "American" whose responses indicate origins outside of the geographical region within which coding schemes have placed them. Some similar responses might therefore appear in separate places.</p> <p>User Caution: The labels associated with each IPUMS ancestry value do not contain all of the possible responses included within each ancestry code. To ensure that they use all codes that are necessary to their research, users are advised to examine the codes and frequencies table and the detailed components of the ancestry values (see Supplemental Code Information below).</p>

Variable: "ANCESTR1D"

Name:	ANCESTR1D
Label:	Ancestry, first response [detailed version]
Variable Text:	<p>ANCESTR1 provides the respondent's self-reported ancestry or ethnic origin. In all years except 1990 and 2000, respondents could give as many ancestries as they saw fit. ANCESTR1 records the first response, while ANCESTR2 records the second response, if one exists. Additional responses were ignored, with the exception of 17 "three-origin" combination codes retained in the 1980 samples; these are described in section A of the comparability discussion below. Some compound responses such as "Pennsylvania Dutch" or "French Canadian" were treated as a single response. Respondents could give virtually any response, though they were instructed not to give a religion (the census is not allowed to collect information on religion). A few responses were not categorized in the samples and were instead coded "Uncodable," "Deferred Cases," or "Other." These uncategorized responses were usually religions.</p> <p>If a respondent listed both a broad category and a subset of that category, such as "German-Bavarian," the Census Bureau used only the subset and ignored the broad category.</p> <p>The IPUMS generally follows the Census Bureau's practice of coding responses alphabetically within geographic regions. Note that some responses, especially within the NORTH AMERICAN (NON-HISPANIC) geographic region, denote people such as "African-American," "French-Canadian," or "American" whose responses indicate origins outside of the geographical region within which coding schemes have placed them. Some similar responses might therefore appear in separate places.</p>

	User Caution: The labels associated with each IPUMS ancestry value do not contain all of the possible responses included within each ancestry code. To ensure that they use all codes that are necessary to their research, users are advised to examine the codes and frequencies table and the detailed components of the ancestry values (see Supplemental Code Information below).

Variable: "ANCESTR2"

Name:	ANCESTR2
Label:	Ancestry, second response [general version]
Variable Text:	ANCESTR2, like ANCESTR1, records the respondent's self-reported ancestry or ethnic origin. ANCESTR1 contains the respondent's first reported ancestry, while ANCESTR2 contains the respondent's second response; additional responses were ignored. Those who gave only one response are coded 9990 (N/A) for ANCESTR2. In 1980, people who reported one of 17 common triple ancestries were coded 9990 for ANCESTR2 (see the

	variable description for ANCESTR1 for a full discussion of the triple ancestries codes in 1980).
Concept:	Race, Ethnicity, and Nativity Variables -- PERSON
Start Position:	758
End Position:	760

Variable: "ANCESTR2D"

Name:	ANCESTR2D
Label:	Ancestry, second response [detailed version]
Variable Text:	ANCESTR2, like ANCESTR1, records the respondent's self-reported ancestry or ethnic origin. ANCESTR1 contains the respondent's first reported ancestry, while ANCESTR2 contains the respondent's second response; additional responses were ignored. Those who gave only one response are coded 9990 (N/A) for ANCESTR2. In 1980, people who reported one of 17 common triple ancestries were coded 9990 for ANCESTR2 (see the variable description for ANCESTR1 for a full discussion of the triple ancestries codes in 1980).
Concept:	Race, Ethnicity, and Nativity Variables -- PERSON
Start Position:	761
End Position:	764
Width:	4
Variable Format:	numeric
Implied Decimal Places:	0

Variable: "CITIZEN"

Name:	CITIZEN
Label:	Citizenship status
Variable Text:	CITIZEN reports the citizenship status of respondents, distinguishing between naturalized citizens and non-citizens. For 1900-1940, respondents who were not yet citizens but who had begun the naturalization process ("received first papers") are identified.
Concept:	Race, Ethnicity, and Nativity Variables -- PERSON

0	N/A
1	Born abroad of American parents

2	Naturalized citizen
3	Not a citizen
4	Not a citizen, but has received first papers
5	Foreign born, citizenship status not reported

Variable: "YRNATUR"

Name:	YRNATUR
Label:	Year naturalized
Variable Text:	YRNATUR reports the 4-digit year in which a foreign-born United States citizen became naturalized. In 1920 (see the instructions to enumerators, below), foreign-born men age 21 and older and unmarried foreign-born women age 21 and older became naturalized citizens through their own efforts. Married foreign-born women achieved their naturalization when they married a native-born man or when their foreign-born husband was naturalized. Foreign-born children (under age 21) of foreign-born parents became naturalized when one of their parents was naturalized.

Variable: "YRIMMIG"

Name:	YRIMMIG
Label:	Year of immigration
	YRIMMIG reports the year in which a foreign-born person entered the United States (or Puerto Rico, for the 1910 and 1920 Puerto Rico samples).

Variable Text:	<p>For the 1900-1930 samples and the 2000-2004 ACS, YRIMMIG reports the exact year of immigration. For 1970-1990, the respondent was asked to report the range of years that included their year of arrival. For the 2000 census and the ACS from 2005 onward, exact years are reported back to 1935; some years prior to 1935 are collapsed into categories (see the codes page for details). The codes for all such categories represent the latest possible year in which a respondent could have immigrated.</p> <p>Other immigration variables are available; see the following table: HTML PUBLIC "-//W3C//DTD HTML 4.01 Transitional//EN" "http://www.w3.org/TR/html4/loose.dtd"></p> <p>table_208.html</p>

Coder Instructions:	<p>YRSUSA1 is a 2-digit numeric code reporting how long a person who was born in a foreign country or U.S. outlying area had been living in the United States. YRSUSA1 specific variable codes for missing, edited, or unidentified observations, observations not applicable (N/A), observations not in universe (NIU), top and bottom value coding, etc. are provided below if applicable by Census year (and data sample if specified).</p> <p>YRSUSA1 Specific Variable Codes 00 = N/A or less than one year.</p> <pre>* .indent { text-indent: 10px; } * .lrgindent { text-indent: 90px; }</pre> <p>YRSUSA1</p> <p>Census Top Code</p>

1900-1930
99+ years

2000
90+ years

ACS
90+ years

User Caution: Since the YRSUSA1 code 00 encompasses two meanings (N/A or less than one year), users who want to distinguish between the two need to interpret this code in conjunction with BPL as follows. For those with BPL less than 100 (born in the U.S.), YRSUSA1 = 00 means "N/A." For those with BPL code 100 or greater (born outside the U.S.), YRSUSA1 = 00 means "less than 1 year."

Variable: "YRSUSA2"

Name:	YRSUSA2
Label:	Years in the United States, intervalled
Variable Text:	<p>YRSUSA2 reports how long a person who was born in a foreign country or U.S. outlying area had been living in the United States.</p> <p>Other immigration variables are available; see the following table: HTML PUBLIC "-//W3C//DTD HTML 4.01 Transitional//EN" "http://www.w3.org/TR/html4/loose.dtd"></p> <p>table_208.html</p>

Variable: "SPEAKENG"

Name:	SPEAKENG
Label:	Speaks English
Variable Text:	SPEAKENG indicates whether the respondent was able to speak English in 1900-1930 and 1970. Beginning in 1980, SPEAKENG indicates whether the respondent speaks only English at home, and also reports how well the respondent, who speaks a language other than English at home, speaks English.

4	Yes, speaks very well
5	Yes, speaks well
6	Yes, but not well
7	Unknown
8	Illegible

Variable: "TRIBE"

Name:	TRIBE
Label:	Tribes [general version]
	<p>In 1990, tribal information is included for all persons who reported their race as American Indian or Alaska Native. In the 2000 census, 2010 census, the ACS, and the PRCS tribal information is only available for American Indians and Alaska Natives who reported a single race. Multi-racial American Indians and Alaska Natives may have written tribal information on the census form, but their tribal information is not available in the public use samples for confidentiality reasons.</p>

Variable Text:	<p>In 1900 and 1910, tribal information is available only for Alaskan residents and for American Indians who were enumerated on the American Indian schedules. The modified schedule used to enumerate American Indians in 1900 and 1910 contained a field labeled "Tribe of this Indian." Enumerators were instructed to "secure the name of the tribe with which the person is connected." The schedule used to enumerate Alaskan residents in 1900 and 1910 also contained a field for "Tribe or Clan."</p> <p>MTRIBE and FTRIBE provide the same information about respondents' parents in 1900 and 1910.</p>

Variable: "TRIBED"

Name:	TRIBED
Label:	Tribe [detailed version]
Variable Text:	<p>In 1990, tribal information is included for all persons who reported their race as American Indian or Alaska Native. In the 2000 census, 2010 census, the ACS, and the PRCS tribal information is only available for American Indians and Alaska Natives who reported a single race. Multi-racial American Indians and Alaska Natives may have written tribal information on the census form, but their tribal information is not available in the public use samples for confidentiality reasons.</p> <p>In 1900 and 1910, tribal information is available only for Alaskan residents and for American Indians who were enumerated on the American Indian schedules. The modified schedule used to enumerate American Indians in 1900 and 1910 contained a field labeled "Tribe of this Indian." Enumerators were instructed to "secure the name of the tribe with which the person is connected." The schedule used to enumerate Alaskan residents in 1900 and 1910 also contained a field for "Tribe or Clan."</p> <p>MTRIBE and FTRIBE provide the same information about respondents' parents in 1900 and 1910.</p>

Variable: "RACAMIND"

Name:	RACAMIND
Label:	Race: American Indian or Alaska Native
Variable Text:	<p>RACAMIND is a bivariate indicator of whether a person's race or races include "American Indian or Alaska Native." In recent years, a single-race American Indian respondent's enrolled or principal tribe can be identified using the detailed version of RACE.</p> <p>Beginning in 2000, individuals were allowed to report multiple races, so RACAMIND and the other bivariate race indicators (RACASIAN, RACBLK, RACOTHER, RACPACIS, and RACWHT) are not mutually exclusive in 2000 and later years. The number of reported races is given in RACNUM.</p>

115	Professional degree beyond a bachelor's degree
116	Doctoral degree
999	Missing

Variable: "GRADEATT"

Name:	GRADEATT
Label:	Grade level attending [general version]
Variable	<p>GRADEATT reports the grade or level of recent schooling for people who attended "regular school or college" at the time of interview (1960-1980) in the past two months (2000) or three months (ACS/PRCS). GRADEATT is only asked of those people who responded "yes" in SCHOOL. However, information from HIGRADE has been used to construct it for the 1960-1980 period as well. For a summary of educational attainment, see EDUC (available from 1940 onward) or HIGRADE (available in fewer samples than EDUC, but gives full detail on grade attendance and completion).</p>

Text:	"Regular school or college" includes only nursery school or preschool, kindergarten, elementary school, and schooling that leads to a high school diploma or a college/graduate degree. The Census Bureau considers tutoring and correspondence courses to be "regular school" if credit can be received in a "regular school." The Bureau does not consider "vocational, technical, or business school" to be "regular school." However, a detailed definition of "regular school or college" was not provided on the form.

Variable: "EMPSTAT"

Name:	EMPSTAT
Label:	Employment status [general version]
Variable Text:	EMPSTAT indicates whether the respondent was a part of the labor force -- working or seeking work -- and, if so, whether the person was currently unemployed. The second digit preserves additional related information available for some years but not others. See LABFORCE for a dichotomous variable that identifies whether a person participated in the labor force or not and is available for all years in the IPUMS.

Variable: "OCC"

Name:	OCC
Label:	Occupation
Variable Text:	<p>Universe Note: "New Workers" are persons seeking employment for the first time, who had not yet secured their first job.</p> <p>OCC reports the person's primary occupation, coded into a contemporary census classification scheme (some non-occupational activities are also recorded in the pre-1940 samples). Generally, the primary occupation is the one from which the person earns the most money; if respondents were not sure about this, they were to report the one at which they spent the most time. Unemployed persons were to give their most recent occupation. For persons listing more than one occupation, the samples use</p>

	the first one listed.

Coder Instructions:	<p>OCC is a 4-digit variable reporting the person's primary occupation, coded into a contemporary census classification scheme (some non-occupational activities are also recorded in the pre-1950 samples). Generally, the primary occupation is the one from which the person earns the most money; if respondents were not sure about this, they were to report the one at which they spent the most time. Unemployed persons were to give their most recent occupation. For persons listing more than one occupation, the samples use the first one listed. OCC specific variable codes for missing, edited, or unidentified observations, observations not applicable (N/A), observations not in universe (NIU), top and bottom value coding, etc. are provided below if applicable by Census year (and data sample if specified).</p> <p>OCC Specific Variable Codes See links below for details regarding OCC codes: 1880 Occupation Codes [URL omitted from DDI.] (used for 1850-1900 samples) 1920 Occupation Codes [URL omitted from DDI.] (used for 1910-1920 samples) 1930 Occupation Codes [URL omitted from DDI.] 1940 Occupation Codes [URL omitted from DDI.] 1950 Occupation Codes - see OCC1950 1960 Occupation Codes [URL omitted from DDI.] 1970 Occupation Codes [URL omitted from DDI.] 1980 Occupation Codes [URL omitted from DDI.] 1990 Occupation Codes [URL omitted from DDI.] 2000 Occupation Codes [URL omitted from DDI.] ACS/PRCS Occupation Codes [URL omitted from DDI.]</p>

Variable: "OCC1950"

Name:	OCC1950
Label:	Occupation, 1950 basis

Variable Text:	<p>Universe Note: "New Workers" are persons seeking employment for the first time, who had not yet secured their first job.</p> <p>OCC1950 applies the 1950 Census Bureau occupational classification system to occupational data, to enhance comparability across years. For pre-1940 samples created at Minnesota, the alphabetic responses supplied by enumerators were directly coded into the 1950 classification. For other samples, the information in the variable OCC was recoded into the 1950 classification. Codes above 970 are non-occupational responses retained in the historical census samples or blank/unknown. The design of OCC1950 is described at length in "Integrated Occupation and Industry Codes and Occupational Standing Variables in the IPUMS." [URL omitted from DDI.]. The composition of the 1950 occupation categories is described in detail in U.S. Bureau of the Census, Alphabetic Index of Occupations and Industries: 1950 [URL omitted from DDI.] (Washington D.C., 1950).</p> <p>In 1850-1880, any laborer with no specified industry in a household with a farmer is recoded into farm labor. In 1860-1900, any woman with an occupational response of "housekeeper" enters the non-occupational category "keeping house" if she is related to the head of household. Cases affected by these imputation procedures are identified by an appropriate data quality flag.</p> <p>A parallel variable called OCC1990, available for the samples from 1950 onward, codes occupations into a simplified version of the 1990 occupational coding scheme.</p>

Variable: "OCC1990"

Name:	OCC1990
Label:	Occupation, 1990 basis

Variable Text:	<p>OCC1990 is a modified version of the 1990 Census Bureau occupational classification scheme. Like OCC1950, OCC1990 offers researchers a consistent long-term classification of occupations.</p> <p>The Census Bureau has reorganized its occupational classification system in almost every census administered since 1850. All original occupational information is stored in the OCC variable. The meaning of codes in the OCC variable changes with each census year. We chose the 1990 scheme as the standard for OCC1990 so that no year's occupational data would be forced to bridge both of the two most significant changes in twentieth-century coding schemes: from 1970 to 1980 and from 1990 to 2000. In OCC1990, all samples from 1950 onward bridge no more than one of these major shifts. For this reason, the variable may be preferable to OCC1950 for the samples from 1980 onward. Sensitivity testing suggests that OCC1990 performs very similarly to OCC1950 for most purposes.</p> <p>The original 1990 occupational scheme [URL omitted from DDI.] has 514 categories. OCC1990 combines a number of occupational categories to maximize the variable's consistency over time. The resulting OCC1990 classification scheme contains 389 categories (see the "Codes and Frequencies" link above). Many users will want to further aggregate categories into the broad occupational categories implicit in the 1990 scheme: Managerial and Professional (000-200); Technical, Sales, and Administrative (201-400); Service (401-470); Farming, Forestry, and Fishing (471-500); Precision Production, Craft, and Repairers (501-700); Operatives and Laborers (701-900); Non-occupational responses (900-999).</p> <p>OCC1990 was created using a series of technical papers published by the Census Bureau shortly after each census was administered. These papers provide detailed analyses of how the occupational coding scheme for each census year differed from the scheme used during the previous census year. These occupational "crosswalks" are based on samples of cases that are "double coded" into the occupational schemes of the current and previous census year. The original Census Bureau crosswalks are available via links in "Occupation and Industry Variables" [URL omitted from DDI.] of the IPUMS documentation.</p> <p>Using the information from the occupational crosswalks, we traced the proportion of each occupation as it broke out into more specific occupations or as it was combined with others into a more general occupation. To take one example from the technical paper produced after the 2000 census: of persons coded as "Gaming managers" in 2000 (2000 code 33), the Census Bureau determined that 35% would have been coded as "Managers, service organizations" in 1990 (1990 code 21), while 65% would have been coded as "Managers, food serving and lodging establishments" (1990 code 17). Thus, OCC1990 assigns a code of 17 to the cases in the 2000 IPUMS sample having an original 2000 OCC value of 33. We generated the same information for every occupational code in every census year from 1950-2000.</p> <p>Researchers at the Bureau of Labor Statistics (BLS) then used the resulting tables to create aggregated occupational categories that were more useful for long-term analyses. We have performed a variety of tests to ensure that the new categories are as robust as possible over the long-term. More specifics on their methods and a detailed comparison of OCC1950 and OCC1990 can be found in the BLS Working Paper [URL omitted from DDI.] on the topic.</p>

364	Shipping and receiving clerks
365	Stock and inventory clerks
366	Meter readers
368	Weighers, measurers, and checkers
373	Material recording, scheduling, production, planning, and expediting clerks
375	Insurance adjusters, examiners, and investigators
376	Customer service reps, investigators and adjusters, except insurance
377	Eligibility clerks for government programs; social welfare
378	Bill and account collectors
379	General office clerks
383	Bank tellers
384	Proofreaders
385	Data entry keyers
386	Statistical clerks
387	Teacher's aides

389	Administrative support jobs, n.e.c.
405	Housekeepers, maids, butlers, stewards, and lodging quarters cleaners
407	Private household cleaners and servants
415	Supervisors of guards
417	Fire fighting, prevention, and inspection
418	Police, detectives, and private investigators
423	Other law enforcement: sheriffs, bailiffs, correctional institution officers
425	Crossing guards and bridge tenders
426	Guards, watchmen, doorkeepers
427	Protective services, n.e.c.
434	Bartenders
435	Waiter/waitress
436	Cooks, variously defined
438	Food counter and fountain workers
439	Kitchen workers
443	Waiter's assistant
444	Misc food prep workers
445	Dental assistants
446	Health aides, except nursing
447	Nursing aides, orderlies, and attendants
448	Supervisors of cleaning and building service
453	Janitors

454	Elevator operators
455	Pest control occupations
456	Supervisors of personal service jobs, n.e.c.
457	Barbers
458	Hairdressers and cosmetologists
459	Recreation facility attendants
461	Guides
462	Ushers
463	Public transportation attendants and inspectors
464	Baggage porters
465	Welfare service aides
468	Child care workers
469	Personal service occupations, nec
473	Farmers (owners and tenants)
474	Horticultural specialty farmers
475	Farm managers, except for horticultural farms
476	Managers of horticultural specialty farms
479	Farm workers
483	Marine life cultivation workers
484	Nursery farming workers
485	Supervisors of agricultural occupations

486	Gardeners and groundskeepers
487	Animal caretakers except on farms
488	Graders and sorters of agricultural products
489	Inspectors of agricultural products
496	Timber, logging, and forestry workers
498	Fishers, hunters, and kindred
503	Supervisors of mechanics and repairers
505	Automobile mechanics
507	Bus, truck, and stationary engine mechanics
508	Aircraft mechanics
509	Small engine repairers
514	Auto body repairers
516	Heavy equipment and farm equipment mechanics
518	Industrial machinery repairers
519	Machinery maintenance occupations
523	Repairers of industrial electrical equipment
525	Repairers of data processing equipment
526	Repairers of household appliances and power tools
527	Telecom and line installers and repairers
533	Repairers of electrical equipment, n.e.c.
534	Heating, air conditioning, and refrigeration mechanics
535	Precision makers, repairers, and smiths

536	Locksmiths and safe repairers
538	Office machine repairers and mechanics
539	Repairers of mechanical controls and valves
543	Elevator installers and repairers
544	Millwrights
549	Mechanics and repairers, n.e.c.
558	Supervisors of construction work
563	Masons, tilers, and carpet installers
567	Carpenters
573	Drywall installers
575	Electricians
577	Electric power installers and repairers
579	Painters, construction and maintenance
583	Paperhangers
584	Plasterers
585	Plumbers, pipe fitters, and steamfitters
588	Concrete and cement workers
589	Glaziers
593	Insulation workers
594	Paving, surfacing, and tamping equipment operators
595	Roofers and slaters
596	Sheet metal duct installers

597	Structural metal workers
598	Drillers of earth
599	Construction trades, n.e.c.
614	Drillers of oil wells
615	Explosives workers
616	Miners
617	Other mining occupations
628	Production supervisors or foremen
634	Tool and die makers and die setters
637	Machinists
643	Boilermakers
644	Precision grinders and filers
645	Patternmakers and model makers
646	Lay-out workers
649	Engravers
653	Tinsmiths, coppersmiths, and sheet metal workers
657	Cabinetmakers and bench carpenters
658	Furniture and wood finishers
659	Other precision woodworkers
666	Dressmakers and seamstresses
667	Tailors
668	Upholsterers

669	Shoe repairers
674	Other precision apparel and fabric workers
675	Hand molders and shapers, except jewelers
677	Optical goods workers
678	Dental laboratory and medical appliance technicians
679	Bookbinders
684	Other precision and craft workers
686	Butchers and meat cutters
687	Bakers
688	Batch food makers
693	Adjusters and calibrators
694	Water and sewage treatment plant operators
695	Power plant operators
696	Plant and system operators, stationary engineers
699	Other plant and system operators
703	Lathe, milling, and turning machine operatives
706	Punching and stamping press operatives
707	Rollers, roll hands, and finishers of metal
708	Drilling and boring machine operators
709	Grinding, abrading, buffing, and polishing workers
713	Forge and hammer operators
717	Fabricating machine operators, n.e.c.

719	Molders, and casting machine operators
723	Metal platers
724	Heat treating equipment operators
726	Wood lathe, routing, and planing machine operators
727	Sawing machine operators and sawyers
728	Shaping and joining machine operator (woodworking)
729	Nail and tacking machine operators (woodworking)
733	Other woodworking machine operators
734	Printing machine operators, n.e.c.
735	Photoengravers and lithographers
736	Typesetters and compositors
738	Winding and twisting textile/apparel operatives
739	Knitters, loopers, and toppers textile operatives
743	Textile cutting machine operators
744	Textile sewing machine operators
745	Shoemaking machine operators
747	Pressing machine operators (clothing)
748	Laundry workers
749	Misc textile machine operators
753	Cementing and gluing maching operators
754	Packers, fillers, and wrappers
755	Extruding and forming machine operators

756	Mixing and blending machine operatives
757	Separating, filtering, and clarifying machine operators
759	Painting machine operators
763	Roasting and baking machine operators (food)
764	Washing, cleaning, and pickling machine operators
765	Paper folding machine operators
766	Furnace, kiln, and oven operators, apart from food
768	Crushing and grinding machine operators
769	Slicing and cutting machine operators
773	Motion picture projectionists
774	Photographic process workers
779	Machine operators, n.e.c.
783	Welders and metal cutters
784	Solderers
785	Assemblers of electrical equipment
789	Hand painting, coating, and decorating occupations
796	Production checkers and inspectors
799	Graders and sorters in manufacturing
803	Supervisors of motor vehicle transportation
804	Truck, delivery, and tractor drivers
808	Bus drivers
809	Taxi cab drivers and chauffeurs

813	Parking lot attendants
823	Railroad conductors and yardmasters
824	Locomotive operators (engineers and firemen)
825	Railroad brake, coupler, and switch operators
829	Ship crews and marine engineers
834	Water transport infrastructure tenders and crossing guards
844	Operating engineers of construction equipment
848	Crane, derrick, winch, and hoist operators
853	Excavating and loading machine operators
859	Misc material moving occupations
865	Helpers, constructions
866	Helpers, surveyors
869	Construction laborers
874	Production helpers
875	Garbage and recyclable material collectors
876	Materials movers: stevedores and longshore workers
877	Stock handlers
878	Machine feeders and offbearers
883	Freight, stock, and materials handlers
885	Garage and service station related occupations
887	Vehicle washers and equipment cleaners
888	Packers and packagers by hand

889	Laborers outside construction
905	Military
991	Unemployed
999	Unknown

Variable: "OCC2010"

Name:	OCC2010
Label:	Occupation, 2010 basis
	<p>OCC2010 is a harmonized occupation coding scheme based on the Census Bureau's 2010 ACS occupation classification scheme. Similar variables are offered for the 1950 (OCC1950) and 1990 (OCC1990) classifications. OCC2010 offers researchers a consistent, long-term classification of occupations.</p> <p>The Census Bureau has reorganized its occupational classification system in almost every census administered since 1850. All original occupational information is stored in the OCC variable. The meaning of codes in the OCC variable changes with each census year. The 2010 occupation coding scheme [URL omitted from DDI.] for OCC has 493 categories. In the interest of harmonization, however, the scheme has been modified to achieve the most consistent categories across time. That is, some categories that provide more detail in the 2010 scheme were grouped together because earlier categories are inseparable when more than one occupation is coded together. For users who wish to further aggregate occupation to broader categories, the 2010 scheme is generally organized by the following groups:</p> <p>Management in Business, Science, and Arts = 10-430 Business Operations Specialists = 500-730 Financial Specialists = 800-950 Computer and Mathematical = 1000-1240 Architecture and Engineering = 1300-1540 Technicians = 1550-1560 Life, Physical, and Social Science = 1600-1980 Community and Social Services = 2000-2060 Legal = 2100-2150 Education, Training, and Library = 2200-2550 Arts, Design, Entertainment, Sports, and Media = 2600-2920 Healthcare Practitioners and Technicians = 3000-3540 Healthcare Support = 3600-3650 Protective Service = 3700-3950 Food Preparation and Serving = 4000-4150 Building and Grounds Cleaning and Maintenance = 4200-4250 Personal Care and Service = 4300-4650 Sales and Related = 4700-4965 Office and Administrative Support = 5000-5940 Farming, Fisheries, and Forestry = 6005-6130</p>

Variable Text:	<p>Construction = 6200-6765 Extraction = 6800-6940 Installation, Maintenance, and Repair = 7000-7630 Production = 7700-8965 Transportation and Material Moving = 9000-9750 Military = 9800-9830 No Occupation = 9920</p> <p>We followed a process of constructing and testing OCC2010 that is similar to OCC1990's process, which is discussed in more detail in this BLS working paper [URL omitted from DDI.].</p> <p>OCC1990 was created using a series of technical papers published by the Census Bureau shortly after each census was administered. These papers provide detailed analyses of how the occupational coding scheme for each census year differed from the scheme used during the previous census year. These occupational "crosswalks" are based on samples of cases that are "double coded" into the occupational schemes of the current and previous census year. The original Census Bureau crosswalks are available via links in "Occupation and Industry Variables" [URL omitted from DDI.] of the IPUMS documentation.</p> <p>Using the information from the occupational crosswalks, we traced the proportion of each occupation as it broke out into more specific occupations or as it was combined with others into a more general occupation. To take one example from the technical paper produced after the 2000 census: of persons coded as "Gaming managers" in 2000 (2000 code 33), the Census Bureau determined that 35% would have been coded as "Managers, service organizations" in 1990 (1990 code 21), while 65% would have been coded as "Managers, food serving and lodging establishments" (1990 code 17). Thus, OCC1990 assigns a code of 17 to the cases in the 2000 IPUMS sample having an original 2000 OCC value of 33. We generated the same information for every occupational code in every census year from 1950-2000.</p> <p>Researchers at the Bureau of Labor Statistics (BLS) then used the resulting tables to create aggregated occupational categories that were more useful for long-term analyses. We have performed a variety of tests to ensure that the new categories are as robust as possible over the long-term. More specifics on their methods and a detailed comparison of OCC1950 and OCC1990 can be found in the BLS Working Paper [URL omitted from DDI.] on the topic.</p>

7610	Helpers--Installation, Maintenance, and Repair Workers
7630	Other Installation, Maintenance, and Repair Workers Including Wind Turbine Service Technicians, and Commercial Divers, and Signal and Track Switch Repairers
7700	First-Line Supervisors of Production and Operating Workers
7710	Aircraft Structure, Surfaces, Rigging, and Systems Assemblers
7720	Electrical, Electronics, and Electromechanical Assemblers
7730	Engine and Other Machine Assemblers
7740	Structural Metal Fabricators and Fitters
7750	Assemblers and Fabricators, nec
7800	Bakers
7810	Butchers and Other Meat, Poultry, and Fish Processing Workers
7830	Food and Tobacco Roasting, Baking, and Drying Machine Operators and Tenders
7840	Food Batchmakers
7850	Food Cooking Machine Operators and Tenders
7855	Food Processing, nec
7900	Computer Control Programmers and Operators

7920	Extruding and Drawing Machine Setters, Operators, and Tenders, Metal and Plastic
7930	Forging Machine Setters, Operators, and Tenders, Metal and Plastic
7940	Rolling Machine Setters, Operators, and Tenders, metal and Plastic
7950	Cutting, Punching, and Press Machine Setters, Operators, and Tenders, Metal and Plastic
7960	Drilling and Boring Machine Tool Setters, Operators, and Tenders, Metal and Plastic
8000	Grinding, Lapping, Polishing, and Buffing Machine Tool Setters, Operators, and Tenders, Metal and Plastic
8010	Lathe and Turning Machine Tool Setters, Operators, and Tenders, Metal and Plastic
8030	Machinists
8040	Metal Furnace Operators, Tenders, Pourers, and Casters
8060	Model Makers and Patternmakers, Metal and Plastic
8100	Molders and Molding Machine Setters, Operators, and Tenders, Metal and Plastic
8130	Tool and Die Makers
8140	Welding, Soldering, and Brazing Workers
8150	Heat Treating Equipment Setters, Operators, and Tenders, Metal and Plastic
8200	Plating and Coating Machine Setters, Operators, and Tenders, Metal and Plastic
8210	Tool Grinders, Filers, and Sharpeners
8220	Metal workers and plastic workers, nec
8230	Bookbinders, Printing Machine Operators, and Job Printers
8250	Prepress Technicians and Workers
8300	Laundry and Dry-Cleaning Workers
8310	Pressers, Textile, Garment, and Related Materials

8320	Sewing Machine Operators
8330	Shoe and Leather Workers and Repairers
8340	Shoe Machine Operators and Tenders
8350	Tailors, Dressmakers, and Sewers
8400	Textile bleaching and dyeing, and cutting machine setters, operators, and tenders
8410	Textile Knitting and Weaving Machine Setters, Operators, and Tenders
8420	Textile Winding, Twisting, and Drawing Out Machine Setters, Operators, and Tenders
8450	Upholsterers
8460	Textile, Apparel, and Furnishings workers, nec
8500	Cabinetmakers and Bench Carpenters
8510	Furniture Finishers
8530	Sawing Machine Setters, Operators, and Tenders, Wood
8540	Woodworking Machine Setters, Operators, and Tenders, Except Sawing
8550	Woodworkers including model makers and patternmakers, nec
8600	Power Plant Operators, Distributors, and Dispatchers
8610	Stationary Engineers and Boiler Operators
8620	Water Wastewater Treatment Plant and System Operators
8630	Plant and System Operators, nec
8640	Chemical Processing Machine Setters, Operators, and Tenders
8650	Crushing, Grinding, Polishing, Mixing, and Blending Workers
8710	Cutting Workers

8720	Extruding, Forming, Pressing, and Compacting Machine Setters, Operators, and Tenders
8730	Furnace, Kiln, Oven, Drier, and Kettle Operators and Tenders
8740	Inspectors, Testers, Sorters, Samplers, and Weighers
8750	Jewelers and Precious Stone and Metal Workers
8760	Medical, Dental, and Ophthalmic Laboratory Technicians
8800	Packaging and Filling Machine Operators and Tenders
8810	Painting Workers and Dyers
8830	Photographic Process Workers and Processing Machine Operators
8850	Adhesive Bonding Machine Operators and Tenders
8860	Cleaning, Washing, and Metal Pickling Equipment Operators and Tenders
8910	Etchers, Engravers, and Lithographers
8920	Molders, Shapers, and Casters, Except Metal and Plastic
8930	Paper Goods Machine Setters, Operators, and Tenders
8940	Tire Builders
8950	Helpers--Production Workers
8965	Other production workers including semiconductor processors and cooling and freezing equipment operators
9000	Supervisors of Transportation and Material Moving Workers
9030	Aircraft Pilots and Flight Engineers
9040	Air Traffic Controllers and Airfield Operations Specialists
9050	Flight Attendants and Transportation Workers and Attendants
9100	Bus and Ambulance Drivers and Attendants

9130	Driver/Sales Workers and Truck Drivers
9140	Taxi Drivers and Chauffeurs
9150	Motor Vehicle Operators, All Other
9200	Locomotive Engineers and Operators
9230	Railroad Brake, Signal, and Switch Operators
9240	Railroad Conductors and Yardmasters
9260	Subway, Streetcar, and Other Rail Transportation Workers
9300	Sailors and marine oilers, and ship engineers
9310	Ship and Boat Captains and Operators
9350	Parking Lot Attendants
9360	Automotive and Watercraft Service Attendants
9410	Transportation Inspectors
9420	Transportation workers, nec
9510	Crane and Tower Operators
9520	Dredge, Excavating, and Loading Machine Operators
9560	Conveyor operators and tenders, and hoist and winch operators
9600	Industrial Truck and Tractor Operators
9610	Cleaners of Vehicles and Equipment
9620	Laborers and Freight, Stock, and Material Movers, Hand
9630	Machine Feeders and Offbearers
9640	Packers and Packagers, Hand
9650	Pumping Station Operators

9720	Refuse and Recyclable Material Collectors
9750	Material moving workers, nec
9800	Military Officer Special and Tactical Operations Leaders
9810	First-Line Enlisted Military Supervisors
9820	Military Enlisted Tactical Operations and Air/Weapons Specialists and Crew Members
9830	Military, Rank Not Specified
9920	Unemployed, with No Work Experience in the Last 5 Years or Earlier or Never Worked

Variable: "IND"

Name:	IND
Label:	Industry
Variable Text:	<p>Universe Note: "New Workers" are persons seeking employment for the first time, who had not yet secured their first job.</p> <p>IND is an un-recoded variable that reports the type of industry in which the person performed an occupation, which is recorded in the variables OCC (Occupation) and OCC1950 (Occupation, 1950 basis). In census usage, "industry" currently refers to work setting and economic sector, as opposed to the worker's specific technical function, or "occupation". Prior to 1930, the occupation and industry concepts were not so clearly distinguishable from one another.</p> <p>Some persons work in more than one industry. Generally, the instructions asked for the industry from which the person earned the most money. Respondents not sure about this were to report the industry in which they spent the most time. For persons listing more than one industry, the samples use the first one listed. Persons not currently employed were to give their most recent industry.</p>

Coder Instructions:	<p>IND is a 4-digit un-recoded variable reporting the type of industry in which the person performed an occupation, which is recorded in the variables OCC (Occupation) and OCC1950 (Occupation, 1950 basis). In census usage, "industry" currently refers to work setting and economic sector, as opposed to the worker's specific technical function, or "occupation". Prior to 1930, the occupation and industry concepts were not clearly distinguishable from one another. Some persons work in more than one industry. Generally, the instructions asked for the industry from which the person earned the most money. Respondents unsure about this were to report the industry in which they spent the most time. For persons listing more than one industry, the samples use the first one listed. Persons not currently employed were to give their most recent industry. IND specific variable codes for missing, edited, or unidentified observations, observations not applicable (N/A), observations not in universe (NIU), top and bottom value coding, etc. are provided below if applicable by Census year (and data sample if specified).</p> <p>IND Specific Variable Codes See links below for details regarding OCC codes: 1910 Industry Codes [URL omitted from DDI.] 1930 Industry Codes [URL omitted from DDI.] 1940 Industry Codes [URL omitted from DDI.] 1950 Industry Codes (also applied to the 1920 data) - see IND1950 1960 Industry Codes [URL omitted from DDI.] 1970 Industry Codes [URL omitted from DDI.] 1980 Industry Codes [URL omitted from DDI.] 1990 Industry Codes [URL omitted from DDI.] 2000 and 2000-2002 ACS Industry Codes [URL omitted from DDI.] 2003-2007 ACS/PRCS Industry Codes [URL omitted from DDI.] 2008-2012 ACS/PRCS Industry Codes [URL omitted from DDI.] 2013-Onward ACS/PRCS Industry Codes [URL omitted from DDI.]</p>

Variable: "IND1950"

Name:	IND1950
Label:	Industry, 1950 basis
	<p>Universe Note: "New Workers" are persons seeking employment for the first time, who had not yet secured their first job.</p> <p>IND1950 recodes information about industry into the 1950 Census Bureau industrial classification system and thus enhances comparability of industry data across all years included in the IPUMS. IND1950 was designed the same way as OCC1950 (Occupation, 1950 basis), the procedure for which is discussed in detail in "Integrated Occupation and Industry Codes and Occupational Standing Variables in the IPUMS." [URL omitted from</p>

Variable Text:	<p>DDI.] The composition of the industry categories is described in detail in U.S. Bureau of the Census, Alphabetic Index of Occupations and Industries: 1950 (Washington, D.C., 1950).</p> <p>The term "labor force" and other key employment concepts are defined in the documentation for EMPSTAT and LABFORCE.</p> <p>In the 1850-1930 samples, the universe for IND1950 relied on persons having an occupation recorded in OCC.</p> <p>A parallel variable called IND1990, available for the samples from 1950 onward, codes occupations into a simplified version of the 1990 occupational coding scheme.</p>

Variable: "IND1990"

Name:	IND1990
Label:	Industry, 1990 basis
Variable Text:	<p>IND1990 classifies industries from all years since 1950 into the 1990 Census Bureau industrial classification scheme. Like IND1950, IND1990 offers researchers a consistent long-term classification of industries.</p> <p>The Census Bureau has reorganized its industrial classification system in almost every census administered since 1940. All original industry information is stored in the IND variable. The meaning of codes in the IND variable changes with each census year. We chose the 1990 scheme as the standard for IND1990 so that no year's industry data would be forced to bridge both of the two most significant changes in twentieth-century coding schemes: from 1970 to 1980 and from 1990 to 2000. In IND1990, all samples from 1950 onward bridge no more than one major change in twentieth-century industrial coding schemes. For this reason, the variable may be preferable to IND1950 for the samples from 1980 onward. Sensitivity testing suggests that IND1990 performs very similarly to IND1950 for most purposes.</p> <p>IND1990 was created using a series of technical papers published by the Census Bureau shortly after each census was administered. These papers provide detailed analyses of how the industrial coding scheme for each census year differed from the scheme used during the previous census year. These industrial "crosswalks" are based on samples of cases that are "double coded" into the industrial schemes of the current and previous census year. The original Census Bureau crosswalks are available via links in "Occupation and Industry Variables" [URL omitted from DDI.] of the IPUMS documentation.</p> <p>Using the information from the industrial crosswalks, we traced the proportion of each industry as it broke out into more specific industries or as it was combined with others into a more general industry. To take one example from the technical paper produced after the 2000 census: of persons coded in "Footwear" in 2000 (2000 code 177), the Census Bureau determined that 11% would have been coded as " Other rubber products, and plastics footwear and belting" in 1990 (1990 code 211), while 89% would have been coded as " Footwear, except rubber and plastic" (1990 code 221). Thus, IND1990 assigns a code of 221 to the cases in the 2000 IPUMS sample having an original 2000 IND value of 177. We generated the same information for every industrial code in every census year from 1950-2000.</p>

Variable: "OCCSOC"

Name:	OCCSOC
Label:	Occupation, SOC classification
Variable Text:	<p>OCCSOC reports the person's primary occupation, classified according to the 1998 Standard Occupational Classification (SOC) system for 2000-2009 and according to the 2010 Standard Occupational Classification (SOC) for 2010 onward. For workers employed during the previous week, the data refer to the job at which the person worked the greatest number of hours. For persons who were unemployed or out of the labor force, the data refer to the most recent job, if it was within the previous five years.</p> <p>The variable OCC provides a numeric occupational classification that is nearly identical to the OCCSOC scheme. The correspondence between the OCC and OCCSOC codes in the 2000 census samples is recorded in a 2000 census crosswalk [URL omitted from DDI.]. The same correspondences are available for the ACS/PRCS samples as a 2000-2010 ACS/PRCS crosswalk [URL omitted from DDI.] and 2010-onward ACS/PRCS crosswalk [URL omitted from DDI.].</p>
Concept:	Work Variables -- PERSON
Start Position:	864
End Position:	869
Width:	6
Variable Format:	character
Implied Decimal Places:	0
Coder Instructions:	<p>OCCSOC is a 6-digit alphanumeric string variable which reports the person's primary occupation, classified according to the 1998 Standard Occupational Classification (SOC) system for 2000-2009 and according to the 2010 Standard Occupational Classification (SOC) for 2010 onward. OCCSOC specific variable codes for missing, edited, or unidentified observations, observations not applicable (N/A), observations not in universe (NIU), top and bottom value coding, etc. are provided below if applicable by Census year (and data sample if specified).</p> <p>OCCSOC Specific Variable Codes</p>

See links below for details regarding OCCSOC codes:
 OCCSOC codes for the 2000 Census [URL omitted from DDI.]
 OCCSOC codes for the ACS/PRCS [URL omitted from DDI.]

Variable: "INDNAICS"

Name:	INDNAICS
Label:	Industry, NAICS classification
Variable Text:	<p>INDNAICS reports the type of establishment in which the person worked, in terms of the good or service produced. INDNAICS codes industries according to the North American Industrial Classification System, which was developed in 1997. This categorization system is substantially different from industry classifications used in prior years.</p> <p>For workers employed during the previous week, the data refer to the job at which the person worked the greatest number of hours. For unemployed persons or those out of the labor force, the data refer to their most recent job, if it was within the previous five years.</p> <p>User Caution: INDNAICS contains alphabetic characters (See IND for a fully numeric classification of industry).</p>
Concept:	Work Variables -- PERSON
Start Position:	870
End Position:	877
Width:	8
Variable Format:	character
Implied Decimal Places:	0
Coder Instructions:	<p>INDNAICS is an 8-digit alphanumeric string variable which reports the type of establishment in which the person worked, in terms of the good or service produced. INDNAICS codes industries according to the North American Industrial Classification System, which was developed in 1997. This categorization system is substantially different from industry classifications used in prior years. INDNAICS specific variable codes for missing, edited, or unidentified observations, observations not applicable (N/A), observations not in universe (NIU), top and bottom value coding, etc. are</p>

provided below if applicable by Census year (and data sample if specified).

INDNAICS Specific Variable Codes

See links below for details regarding INDNAICS codes:

2000 and 2000-2002 ACS INDNAICS codes [URL omitted from DDI.]

2003-onward ACS/PRCS INDNAICS codes [URL omitted from DDI.]

Variable: "WKSWORK2"

Name:	WKSWORK2				
Label:	Weeks worked last year, intervalled				
Variable Text:	<p>WKSWORK2, like WKSWORK1, reports the number of weeks that the respondent worked for profit, pay, or as an unpaid family worker during the previous year. For the census, the reference period is the previous calendar year; for the ACS, the reference period is the previous 12 months. WKSWORK2 differs from WKSWORK1 in that responses are given in intervals (1-13 weeks, 14-26 weeks, and so on), instead of the precise number of weeks. This is because the 1960 and 1970 samples recorded weeks worked only in intervals. For the other years contained in WKSWORK2 (the 1940-1950 and 1980-2000 censuses, the ACS, and the PRCS), the exact number of weeks worked is recorded in WKSWORK1.</p> <p>For further discussion, see the WKSWORK1 variable description. See EMPSTAT for definitions of key labor force and employment terminology.</p>

Variable: "WRKLSTWK"

Name:	WRKLSTWK
Label:	Worked last week
Variable Text:	<p>WRKLSTWK indicates whether or not persons did any work during the previous week either for pay or profit. Even if respondents only worked one hour, helped without pay in a family business or farm for 15 hours or more, or were on active duty in the Armed Forces, they were instructed to answer "yes" to this question. Conversely, housework, school work, and unpaid volunteer work were not counted as work.</p> <p>User Note: This variable is based on the same question as the variable EMPSTAT, however WRKLSTWK is a separate PUMS variable in the dataset. The variables are slightly different, as EMPSTAT is a recoded variable and WRKLSTWK is not recoded. People who were in the universe for WRKLSTWK but did not respond to the question were placed in a separate</p>

Variable: "AVAILBLE"

Name:	AVAILBLE
Label:	Available for work
	AVAILBLE indicates whether or not persons who did not work during the previous week and were actively seeking a job or planning to open their own business or professional practice (collectively referred to as people "looking for work" - see LOOKING), were

Variable Text:	<p>currently available to take any work they might find.</p> <p>See EMPSTAT for further discussion of labor force and employment concepts.</p> <p>People not at work and not absent from a job or business should have responded "no" to the question(s). While the 1980 and 1990 censuses collected information about layoffs and absences for other reasons using a single question, the ACS, the PRCS and census 2000 used two separate questions. Persons who did not work the previous week would be considered either unemployed or not in the labor force, depending on their responses to other questions. Persons who had worked during the previous week were excluded from the universe.</p>

Variable: "INCEARN"

Name:	INCEARN
Label:	Total personal earned income
	<p>INCEARN reports income earned from wages or a person's own business or farm for the previous year. The censuses collected information on income received from these sources during the previous calendar year; for the ACS and the PRCS, the reference period was the past 12 months. The value of INCEARN is the total for the IPUMS variables INCWAGE, INCBUS, and INCFARM (for 1990) and for INCWAGE and INCBUS00 (for the 2000 census, the ACS, and the PRCS). Note that these components of INCEARN are themselves already Top coded. See those variables for further discussion. Because the universe for those variables is age 16+, all persons under age 16 have a value of 0 for INCEARN.</p>

Variable Text:	<p>Amounts are expressed in contemporary dollars, and users studying change over time must adjust for inflation (See INCTOT for Consumer Price Index adjustment factors). The exception is the ACS/PRCS multi-year files, where all dollar amounts have been standardized to dollars as valued in the final year of data included in the file (e.g., 2007 dollars for the 2005-2007 3-year file). ---------------------	---

Variable: "POVERTY"

Name:	POVERTY
Label:	Poverty status
	<p>POVERTY treats respondents who live in families collectively. It expresses each family's total income for the previous year as a percentage of the poverty thresholds established by the Social Security Administration in 1964 and subsequently revised in 1980, adjusted for inflation (see the poverty definition page [URL omitted from DDI.] for more information). POVERTY assigns all members of each family - not each household - the same code. POVERTY is also calculated for most adults living as unrelated individuals. For the 1950-2000 censuses, the reference period for income is the previous calendar year; for the ACS and the PRCS, the reference period is the preceding 12 months from the date of interview.</p> <p>Whether an individual falls below the official "poverty line" depends not only on total family income, but also on the size of the family, the number of people in the family who are children, and the age of the householder (under/over age 65). POVERTY was created using detailed income and family structure information about each individual and calculating the family income as a percentage of the appropriate official poverty threshold. For example, if a person's family income is \$20,000 and the poverty threshold for such a person is \$13,861, then the value of POVERTY for that individual is $\\$20,000/\\$13,861 \times 100$ percent, or 144. Individuals whose family income is more than</p>

Variable Text:	<p>five times the appropriate poverty threshold receive a POVERTY value of 501. For more detail on the precise poverty thresholds used for the POVERTY variable, see the poverty definition page [URL omitted from DDI.].</p> <p>In POVERTY, the IPUMS evaluates poverty status individually for each distinct family unit in the household, as defined in FAMUNIT. For example, all persons related to the household head receive the same poverty value as the head, while an unrelated person and her child would share their own value distinct from that of the primary family.</p> <p>The original PUMS samples for years prior to 1990 did not include a poverty variable. Original PUMS samples from 1990 onward included poverty values, but IPUMS poverty values differ from the original PUMS values in a key way. The original PUMS samples treated all households members unrelated to the head as one-person families when assigning poverty values, even if such persons were part of a secondary family (i.e., persons living with their own relatives but not related to the household head). Thus, the original PUMS poverty measures do not account for the presence of children (or any other aspect of family size and composition) in secondary families. For example, in the original 1990 PUMS sample, a woman unrelated to the householder who has a child would receive a poverty value appropriate for a single person with a given income, rather than for a two-person family with a child. Consequently, the original PUMS samples from 1990 onwards tend to underestimate poverty. In the IPUMS, by contrast, the POVERTY value would be based on the threshold fitting the secondary family consisting of both the mother and the child. The IPUMS samples also round to the nearest poverty value, while the original census PUMS samples always round up.</p> <p>User Caution: The incomes of the highest-earning individuals are "top-coded" in the 2000 census data, the ACS and the PRCS samples (see 2000 income Top codes [URL omitted from DDI.]). In the 2000-2007 period, for individuals in the first family unit of every household (cases where FAMUNIT=1), POVERTY uses the poverty values in the original PUMS samples, which are based on respondents' pre-top-coded income information. The POVERTY value for some of these cases will differ from calculations one could make by hand using the available information in the top-coded income variables. As noted above, the IPUMS calculates POVERTY values for members of secondary families, and these values are based on top-coded income information. (Like the ACS, the IPUMS also uses the income adjustment factor before calculating poverty, although use of this factor is not recommended with IPUMS data. See the ACS income standardization note [URL omitted from DDI.] for more information.) This variable also includes some valid values for group quarters (GQ) residents, even though the stated universe does not include such cases. Users who want to maintain a consistent universe should manually exclude group quarters residents.</p>

Variable: "MIGRATE1"

Name:	MIGRATE1
Label:	Migration status, 1 year [general version]
Variable Text:	<p>MIGRATE1 reports whether the person had changed residence since a reference point 1 year ago. Specifically, individuals age 1+ were asked if they had lived in the "same house" (non-movers) or a "different house" (movers) one year earlier. Persons who had moved were to indicate the foreign country or the state, county, and place of their normal residence during the reference year. Migration data were collected only for sample-line persons in 1950.</p> <p>The category "Same house" includes all eligible persons who did not move since the reference year, as well as those who had moved but by the enumeration or survey date had returned to their earlier residence. The category "Different house" includes persons who lived in a different house in the reference year. For 1950, movers (those who reported living in a different house in the reference year) are further subdivided according to type of move (e.g., within the county or across state lines). The ACS and the PRCS report only same/different residence and identifies those previously living abroad.</p> <p>Therefore, for the ACS/PRCS samples, MIGRATE1 uses information contained in the IPUMS variable MIGPLAC1 and compatible PUMAs of migration and PUMAs of residence to indicate whether movers migrated between states or within the same state (the same levels of detail in the 1950 classification.). For movers who migrated between states, a detailed version of MIGRATE1 indicates whether they moved between contiguous or non-contiguous states. For movers who migrated within the same state, detailed MIGRATE1 indicates whether they moved within or between PUMAs.</p>

Variable: "MIGRATE1D"

Name:	MIGRATE1D
Label:	Migration status, 1 year [detailed version]
	<p>MIGRATE1 reports whether the person had changed residence since a reference point 1 year ago. Specifically, individuals age 1+ were asked if they had lived in the "same house" (non-movers) or a "different house" (movers) one year earlier. Persons who had moved were to indicate the foreign country or the state, county, and place of their normal residence during the reference year. Migration data were collected only for sample-line persons in 1950.</p> <p>The category "Same house" includes all eligible persons who did not move since the reference year, as well as those who had moved but by the enumeration or survey date</p>

Variable Text:	<p>had returned to their earlier residence. The category "Different house" includes persons who lived in a different house in the reference year. For 1950, movers (those who reported living in a different house in the reference year) are further subdivided according to type of move (e.g., within the county or across state lines). The ACS and the PRCS report only same/different residence and identifies those previously living abroad.</p> <p>Therefore, for the ACS/PRCS samples, MIGRATE1 uses information contained in the IPUMS variable MIGPLAC1 and compatible PUMAs of migration and PUMAs of residence to indicate whether movers migrated between states or within the same state (the same levels of detail in the 1950 classification.). For movers who migrated between states, a detailed version of MIGRATE1 indicates whether they moved between contiguous or non-contiguous states. For movers who migrated within the same state, detailed MIGRATE1 indicates whether they moved within or between PUMAs.</p>

Variable: "MIGPUMA1"

Name:	MIGPUMA1
Label:	PUMA of residence 1 year ago
	MIGPUMA1 identifies the location where the respondent lived one year ago, in terms of the Public Use Microdata Area of 100,000+ residents, defined by the Census Bureau (see PUMA). PUMAs are state-dependent (in the case of Puerto Rico, PUMAs are dependent on the Puerto Rican territory), and thus MIGPUMA1 can only be interpreted in combination with MIGPLAC1.

Variable Text:	<p>Some PUMAs are combined for MIGPUMA1 (see Codes and Frequencies, above), so the codes for PUMA of residence 1 year ago (in MIGPUMA1) and the PUMA of current residence (in PUMA) differ slightly.</p> <p>USER WARNING: The 2012 and 2013 ACS samples contain known MIGPUMA coding errors on the original Census Bureau PUMS files for Wisconsin and Georgia. In Wisconsin the MIGPUMA1 code of 00100 was mistakenly assigned to both Dane County and the group of Ashland, Bayfield, Burnett, Douglas, Iron, Price, Rusk, Sawyer, Taylor, and Washburn counties. Similarly, MIGPUMA1 04000 in Georgia mistakenly identifies both Gwinnett County and Richmond County. The Census Bureau corrected this issue by assigning Gwinnett County a code of 04007 and Dane County a code of 00104 starting with the 2014 ACS.</p> <p>The 2012, 2013, and 2014 ACS samples contain known MIGPUMA coding errors on the original Census Bureau PUMS files for Virginia and South Carolina. In Virginia, the MIGPUMA1 code of 51000 was mistakenly assigned to both the Charlottesville area (Albemarle, Fluvanna, Greene, Louisa, Nelson Counties, and Charlottesville city) and the Roanoke area (Alleghany, Botetourt, Craig, Franklin, and Roanoke Counties; and Covington, Roanoke, and Salem cities). Starting with the 2015 ACS, the Charlottesville area has a MIGPUMA code of 51001. Similarly, in South Carolina, the MIGPUMA1s for Lexington and Saluda Counties and for Calhoun, Fairfield, Kershaw, and Richland Counties were assigned duplicate codes of 00600. Starting with the 2015 ACS, Lexington and Saluda Counties has a MIGPUMA1 code of 00606.</p> <p>Note Regarding Multi-Year Samples: The Census Bureau redraws PUMA boundaries every 10 years based on population information gathered from the most recent decennial census. ACS samples incorporate the new PUMAs within a few years of the Decennial Census. See the comparability statement to see which PUMAs are used in each sample. In Multi-Year ACS files, PUMA boundaries depend on the original year the respondent was interviewed (see MULTYEAR). For example in the 2010-2012 3-year ACS sample, respondents from 2010 and 2011 correspond to the Census 2000 based PUMAs, while respondents from 2012 correspond to the Census 2010 based PUMAs.</p>

Variable: "MOVEDIN"

Name:	MOVEDIN
Label:	When occupant moved into residence
Variable Text:	<p>MOVEDIN reports the number of years ago that each person (for 1960-1970), or that the householder (for 1980 on), moved into the dwelling unit (apartment, house, or mobile home). Persons who moved back into the same house or apartment where they lived previously were to report the year when they began the present occupancy. Persons who moved from one apartment to another in the same building were to report the year they moved into the present apartment.</p> <p>The question on the form asks in what year the person had moved into this house, apartment, or mobile home. The IPUMS recodes the original categories into lengths of time to increase comparability.</p> <p>The Census Bureau released revised data for the 2004 ACS in November 2010. MOVEDIN reports these revised values. We provide MOVEDINORIG so that users can analyze the differences in the revisions or replicate previous analyses. However, we recommend that users analyze the revised variable MOVEDIN in their research. For more information about this revision, please see the ACS website. [URL omitted from DDI.]</p>

Variable: "VETDISAB"

Name:	VETDISAB
Label:	VA service-connected disability rating
Variable Text:	VETDISAB gives the disability rating (if any) of veterans who have a service-connected disability. As defined by the United States Department of Veterans Affairs, a service-connected disability is caused by "an injury or illness that was incurred or aggravated during active military service." Assigned by the VA, service-connected disability ratings influence a person's eligibility and order of priority for health-care services. For more information, see the federal government's explanation of service-connected disabilities [URL omitted from DDI.].

Variable: "PWSTATE2"

Name:	PWSTATE2
Label:	Place of work: state

Variable Text:	<p>PWSTATE2 reports the state in which the respondent's primary workplace was located. If the person worked abroad, this is also indicated. In some cases, the state is not identified, such as in the 1980 Puerto Rico census (see below).</p> <p>In 1980, responses to questions about workplace location were coded for only half the persons in the IPUMS. These cases yield representative proportional distributions but not correct absolute numbers for the general population. To generate accurate absolute numbers for 1980, users should select cases coded as 2 in MIGSAMP and multiply by 2 as well as by PERWT.</p>

PWPUMA00 is only available for the 5 percent sample of Census 2000, and the 2005-onward ACS and PRCS samples. Further, the codes for PUMAs are state-dependent, so PWPUMA00 can only be interpreted in combination with PWSTATE2. PWPUMA00 specific variable codes for missing, edited, or unidentified observations, observations not applicable (N/A), observations not in universe (NIU), top and bottom value coding, etc. are provided below by Census year (and data sample if specified).</p> <p>User Note: PUMAs defined for place of work (PWPUMA00) differ slightly from PUMAs defined for place of current residence (PUMA). In most cases, the two are identical. For a few cases, however, multiple PUMAs of residence are combined to form a larger PUMA of work. See Codes and Frequencies for the relationship between PWPUMA00 codes and PUMA codes.</p> <p>PWPUMA00 Specific Variable Codes 00000 = N/A or not identifiable 00001 = Did not work in the United States or in Puerto Rico</p> <p>See links for details regarding PUMA00 codes: Census 2010 based PWPUMA maps and Boundary Files [URL omitted from DDI.] Relationship between Census 2010 PUMAs of Place of Work (PWPUMA00) and Census 2010 PUMAs [URL omitted from DDI.] Census 2000 bases PUMA and Super-PUMA Maps, Boundary files and Detailed Composition [URL omitted from DDI.] Relationship between Census 2000 PUMAs of Place of Work (PWPUMA00) and Census 2000 PUMAs [URL omitted from DDI.]</p>

Variable: "TRANWORK"

Name:	TRANWORK
Label:	Means of transportation to work

Variable Text:	TRANWORK reports the respondent's primary means of transportation to work on the most recent day worked (1970), or over the course of the previous week (the 1960 and 1980-2000 censuses, the ACS, and the PRCS). The primary means of transportation was that used on the most days or to cover the greatest distance.

Variable: "RIDERS"

Name:	RIDERS
Label:	Vehicle occupancy
Variable Text:	<p>RIDERS reports how many people (including the respondent) usually rode to work in the vehicle that the respondent took to work during the previous week. This excludes persons who drove or rode in the same vehicle to school, or who returned home after dropping off workers, or who rode to any other non-work location. A worker who rode to work with one or more other people, but who was the only worker in the vehicle, was counted as driving alone.</p> <p>Users should see TRANWORK for clarification of the universe statement (persons age 16+ who worked last week and used a private auto, truck, or van as their primary means of transportation to work).</p>

Variable: "TRANTIME"

Name:	TRANTIME
Label:	Travel time to work
	TRANTIME reports the total amount of time, in minutes, that it usually took the respondent to get from home to work last week.

Variable Text:	In 1980, responses to questions about travel time to work were coded for only half the persons included in the IPUMS. These cases provide accurate proportional distributions but not correct absolute numbers for the general population. For correct absolute numbers, users should select cases coded as 2 in MIGSAMP and multiply by 2 as well as by PERWT.
Concept:	Place of Work and Travel Time Variables -- PERSON

End Position:	988
Width:	3
Variable Format:	numeric
Implied Decimal Places:	0
Coder Instructions:	<p>TRANTIME is a 3-digit numeric variable reporting the total amount of time, in minutes, that it usually took the respondent to get from home to work last week. TRANTIME specific variable codes for missing, edited, or unidentified observations, observations not applicable (N/A), observations not in universe (NIU), top and bottom value coding, etc. are provided below by Census year (and data sample if specified).</p> <p>TRANTIME Specific Variable Codes 000 = N/A</p> <p>Values Exceeding Top codes, by State: 2003 ACS [URL omitted from DDI.], 2004 ACS [URL omitted from DDI.], 2005 ACS/PRCS [URL omitted from DDI.], 2006 ACS/PRCS [URL omitted from DDI.], 2007 ACS/PRCS [URL omitted from DDI.], 2005-2007 ACS/PRCS 3-Year [URL omitted from DDI.], 2008 ACS/PRCS [URL omitted from DDI.], 2006-2008 ACS/PRCS 3-Year [URL omitted from DDI.], 2009 ACS/PRCS [URL omitted from DDI.], 2007-2009 ACS/PRCS 3-Year [URL omitted from DDI.], 2005-2009 ACS/PRCS 5-Year [URL omitted from DDI.], 2010 ACS/PRCS [URL omitted from DDI.], 2008-2010 ACS/PRCS [URL omitted from DDI.], 2006-2010 ACS/PRCS [URL omitted from DDI.], 2011 ACS/PRCS [URL omitted from DDI.], 2009-2011 ACS/PRCS [URL omitted from DDI.], 2007-2011 ACS/PRCS [URL omitted from DDI.], 2012 ACS/PRCS [URL omitted from DDI.], 2010-2012 ACS/PRCS [URL omitted from DDI.], 2008-2012 ACS/PRCS [URL omitted from DDI.], 2013 ACS/PRCS [URL omitted from DDI.], 2011-2013 ACS/PRCS 3-Year [URL omitted from DDI.], 2009-2013 ACS/PRCS 5-Year [URL omitted from DDI.], 2014 ACS/PRCS [URL omitted from DDI.], 2010-2014 ACS/PRCS 5-Year [URL omitted from DDI.], 2015 ACS/PRCS [URL omitted from DDI.]</p>

Variable: "DEPARTS"

Name:	DEPARTS
Label:	Time of departure for work
Variable Text:	DEPARTS reports the time that the respondent usually left home for work last week. Time is measured using a 24-hour clock, where 12:01 a.m. is coded as 0001 and 11:59 p.m. is coded as 2359.
Concept:	Place of Work and Travel Time Variables -- PERSON

Coder Instructions:	<p>DEPARTS is a 4-digit numeric variable reporting the time that the respondent usually left home for work last week. Time is measured using a 24-hour clock, where 12:01 a.m. is coded as 0001 and 11:59 p.m. is coded as 2359. DEPARTS specific variable codes for missing, edited, or unidentified observations, observations not applicable (N/A), observations not in universe (NIU), top and bottom value coding, etc. are provided below by Census year (and data sample if specified).</p> <p>User Note: In 1990, the data are reported in exact minutes. In the 2000 Census, the ACS and the PRCS, values represent the midpoint of a range.</p> <p>DEPARTS Specific Variable Codes 0000 = N/A</p>

Variable: "ARRIVES"

Name:	ARRIVES
Label:	Time of arrival at work

Variable Text:	ARRIVES reports the time that the respondent usually arrived at work last week. Time is measured using time intervals based on the 24-hour clock and is coded using the latest time in the interval, such that arrival between 12:01 a.m. and 12:04 a.m. is coded as 0004 and arrival between 11:55 p.m. and 11:59 p.m. is coded as 2359.

Variable: "GCHOUSE"

Name:	GCHOUSE
Label:	Own grandchildren living in household
Variable Text:	GCHOUSE indicates whether respondents have any of their own grandchildren under the age of 18 living with them in the house or apartment. This question was asked of people 15 years of age and over. On the assumption that younger people cannot have grandchildren, the Census Bureau edited the data to include only responses from people aged 30 and over. People aged between 15 and 29 were edited as not having any grandchildren.
